

Ecomomo

The Ecomomo is a smart bottle that not only knows what's in your water, but can also make it safe to drink. It's also trying to reduce the usage of plastic bottles and save the environment at the same time. An Ecomomo can theoretically save approximately 228 plastic bottles in three months!

How it works is simple, shake the bottle to test the water, then twist to filter the water and make it safe to drink. It has a 3-in-1 filtration system which can get rid of most major contaminants, including things like pesticides, petrochemical products, bacteria and heavy metals. What this means you can refill your Ecomomo from pretty much any water source. The Ecomomo also comes with its own app where you track your filtration history and other data and a wearable activity tracker with hydration alerts. It's also compatible with FitBit and Apple Watch. The Ecomomo recharges quickly and lasts over a week on full charge, it's BPA-free and machine washable. Look for Ecomomo on Kickstarter to support it or maybe even get one for yourself.

Square Off

In a world where everything happens online, the feeling of playing a game like Chess on a real chess board is a rare one. Alessandro Didonna aims to change that with Square Off, an evolved and smart chess board. With Square Off you can play a game of chess against anyone from around the world!

Square Off is automated and designed to precisely reflect your opponent's moves. Square Off comes with multiple playing modes. Square Off mode: challenge anybody from around the world, board vs board or board vs app.

Training mode: play against the AI with up to 20 different difficulty levels, and lastly Live streaming mode: record and play your matches in addition to being able to watch any match, worldwide. You can back Square Off on Kickstarter with the Super Early Bird Offer at €179 (₹13,100/- approx).

CamBuddy Pro

The CamBuddy Pro is a powerful solution to remotely control your camera through your smartphone. You remotely control your camera from up to 100 feet away over Wi-Fi. The pictures and videos you take can be instantly transferred from your camera to your smartphone, so you don't need to use a desktop as a bridge. The CamBuddy comes with a built-in intervalometer to help you with time-lapse photos. It's small, but packed with features like a light sensor, sound sensor, laser detector, and a radio transceiver to help you with your photography. It works with most popular DSLR cameras, allowing you to view live footage on your smartphone and adjust parameters. The CamBuddy Pro comes with its own free app – Joopic – with which you can control the CamBuddy and adjust settings. Thanks to its four built-in sensors you can easily and quickly capture high-speed moments. You can connect and control up to 128 cameras for some matrix-levels of photography. You should definitely consider checking the CamBuddy Pro out if you're a budding photographer yourself.

Double Sapphires

Smartphones are getting crazy expensive these days, so it's in everyone's interest to protect their own phones. You'd obviously want the best protection for your devices and the Double Sapphires screen protectors might be just the protection you need. The Double Sapphires screen protector is dubbed so because it comes with a double layer of modified glass. It's got two Nano coatings, oleophobic, and photosensitive coats. The structure has been worked on at a molecular level to make it stronger and more resistant with the addition of Aluminium Oxide (Al₂O₃). It also takes almost three times longer to make when compared to tempered glass. It's available for Apple's iPhone 5, 5S, SE, 6/6s and 6/6s Plus, 7 and 7 Plus variants, and on the Samsung side of things, the Galaxy S5, S6, S7, Note 4, Note 5, and Note 7 (RIP). The campaign is still live on Kickstarter so feel free to head there and back them.
