

Airblock

The Airblock by MakeBlock is a modular and programmable drone aimed at starters. Thanks to magnetic attachment and modularity, how you build and use the Airblock is entirely upto your imagination. Not only is the Airblock a cool gizmo to toy around and play with, it also incorporates the basics of engineering and physics. This also makes it a great and fun way to get kids into programming at an early age. The Airblock let's you build, code, and fly it the way you see fit. Since the Airblock is programmable, you can actually do some cool aerial stunts with it as well. It's made of a light-weight plastic foam material, which is both soft and durable, making it safe for kids to play with and at the same time, indoor friendly. You can fly and control the Airblock via an app which supports both Android and iOS. The Airblock retails for \$149 (₹10,000/- approx) but you can get it for less by visiting them on Kickstarter. Happy flying!

SOMETHING EXCITING THIS WAY COMES

The Digit e-mag app is now listed on app stores

It's still in beta though. We're perfectionists and want to make the app even better before the "official launch".
