

BMW Cruise e-Bike

The BMW Cruise e-Bike Protonic Dark Silver is limited to just 300 units. It uses an exclusive colour scheme, one to match with the Dark Silver finish of the BMW i8 special edition which was just premiered at the Paris Motor Show. The Cruise e-Bike comes with Electric Blue rims, only further accentuating its sporty look. BMW want to deliver a unique riding experience no matter what the mode. They wish to deliver this on the Cruise e-Bike with its "hybrid drive" feature: A Performance-Line drive with a 400-Wh battery which supports pedaling in four different modes. It has a top-speed of 25 kmph with electric pedal assistance and a 10-gear system which they promise will ensure smooth transmission, be it when you're riding up or down steep slopes, or zooming across flat terrain. Each Cruise e-Bike comes with a certificate and a special badge, because limited edition. The BMW Cruise e-Bike Limited Edition is priced at €3,500 (₹2.6 lac approx) and is available only at select BMW retailers.

Zenith El Primero Range Rover

Car makers and watchmakers have been known to unite in the past to create some rather spectacular and elaborate watches. This time, one such union between Land Rover and Zenith has resulted in the exclusive Zenith El Primero Range Rover Special Edition watch collection. It comes with a 42mm wide, ceramised, matte-finished aluminum case, which is of course inspired by the all-aluminium chassis of the Range Rover. It has a dark toned dial which compliments the vertical brushed finishing of the watch face beautifully. The straps are made of perforated calfskin leather to resemble the interiors of the car, and they also come with options for ivory or blue. The Zenith El Primero is also water resistant up to 100 meters. If this collection tickles your fancy, you can add it to your own for \$7,700 (₹5.1 lac approx).

APP WATCH

ToneTag

ToneTag uses sound to enable payments at the point of sale. Yes, you heard us right, Sound is what carries your money! Well, not literally. ToneTag incorporates encrypted sound emitted from the speakers of a phone or a POS device to generate a payment request, which a receiver with ToneTag can accept due to the microphone on their smartphone. Even when the Point of Sale

terminal is not a smartphone, the service can use the sound created by the capacitors inside a POS device to detect the merchant.

NearU

Capitalizing on the discount hunting behavior of the modern customer, NearU lists offers and special prices from stores all around you from multiple categories like Food and Beverage (we were sure to put this first!), automobile, clothing, electronics, health and beauty to name a few. It also lists hot deals across categories that are worth your attention. There are some

useful features like a map view showing the stores and number of offers around you. And if you have any favorite brands or stores you can directly filter and set favorites to never lose out any local deal again. If only the app could allow online order..oh wait, that's just us being too lazy!

Shazam Lite

When you have used Shazam you must have noticed the barrage of information that they provide for each recognized track. Shazam is quite heavy and now they've released a Lite version of the app for low speed connections and weaker phones. Shazam Lite takes out almost everything from the main Shazam app, leaving behind only the song identification feature. Compared to

the main app, the song identification itself is faster, and combined with the fact that it returns the result as just a couple of lines of text, it makes using Shazam Lite quite hassle free compared to the main app.
