

Book cabs without an app

Google search results now lets you book Uber and Ola cabs from its app or Chrome browser, along with price estimates. <http://dgit.in/GSRBCab>

Kirin 960 SoC launched

Huawei has unveiled its new octa-core SoC, the Kirin 960 that is powered by four ARM Cortex-A79 cores and four A53 cores. <http://dgit.in/Kirin960>

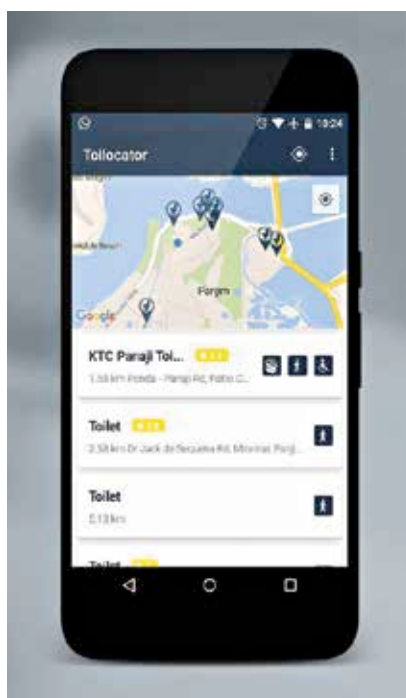

A fashion curation app and website for womenswear, Hippily's approach to curation is mainly divided into two areas - featured content (in the 'Featured' section) and curated products (in the 'Explore' section). Don't get me wrong, the first type is built by the team using products from the second. The focus on quality is evident from the fact that the content is not biased towards big online stores; rather, they seem to focus more on smaller stores with a better sense of fashion. It does take the social approach by allowing you to follow other users and products that they have 'hipped'. Most of this social activity can be seen in the 'Feed' section which also showcases 'Deal' and other types of alerts. On top of that, any user can 'Hip' products (from the 'Add' feature in their profile). Think of it as an Instagram for fashion shopping!

While the app and website do have certain kinks that need to be ironed out, this one strikes the right balance between being a social network and a e-commerce curator without being too much of either.

Find a public restroom

Availability and awareness about toilets in India is not very good,

especially when it comes to toilets for women. The irony is, hygiene concerns are higher for women's toilets compared to men's. To truly solve this problem, there needs to be a much higher number of well maintained public toilets that are equally accessible to everyone, especially women, from all stratas of society. Until then, there are some apps and websites that are trying to solve this using tech.

Google maps helps you find a lot of things near you, and that includes toilets. Simply search 'Toilets near me', and maps will return the locations near you that have been categorised as public toilets. While the number of results might be few, you can count on it being correct.

Toilocator is an app that returns many more results. Unfortunately, the app allows any user to mark a toilet on the map. While this is not entirely reliable, it is a step in the right direction, and we found more than 10 results around us the moment we launched it. Currently, there is no way to manually set your present location. Also, sitorsquat.com is another website that is trying to do this globally.

Transportation

Awareness for proper transportation methods is more of a need of the hour than a general awareness issue for women. Most of the recent assault cases around the country have been daily commute related, both through public transport as well as private. While general security apps are always applicable, there are some choices that women could make regarding their transport and daily commute that can make it a lot safer.

When it comes to buses, quite a few app based shuttle services have stated that have the advantage of a guaranteed seat. Out of those, Zipgo is the one with the widest coverage as of now. It suggests routes from its existing pool based on your desired boarding and destination points and shows you directions to the nearest boarding points. There are equally good city specific options, like Cityflo for Mumbai.

For cabs, which have also been subjected to a lot of scrutiny when it comes to women safety, we would advise certain safety measures. The two majorly used cab providers in India are Uber and Ola. While Uber does provide you the feature to add emergency contacts, and contact them in the event of an emergency, Ola takes it one step further by letting you travel with your friends. Ola Groups is a feature on the Ola app

that lets you create a custom group with your contacts and book shared cabs, which will be charged to them automatically. Even the emergency contacts feature on Ola has a toggle that enables universal booking alerts to specific emergency contacts. [d](#)
