

INTO THE DARNET

Along with Machine learning, Self Driving cars, AI and much

more, lies the Deep Web where the Darknet is also rising. Here are some chronicles of the deepest darkest secrets, all through the eyes of a master hacker, now turned into a security expert.

YOUR MOVE, UBER

Amidst Uber, Lyft and many more ride-sharing companies, there is Juno. From the founders of Viber, Juno is a company that promises a new way to ride. How? By stealing Uber and Lyft's top rated drivers and offering them equity in the company.

MEMORIAL BOTS

When your closed one passes away, what can you

do in order to preserve his memory? Turn his life into a biography book? Make a website? Using Artificial intelligence and machine learning, creating a memorial bot can surely make things eternal.

Mercedes Generation EQ

It could be the Paris climate change conference, but electric cars were kind of the theme of the whole Paris Motor show. Mercedes Generation EQ was another electric concept showed off by the German car maker. The EQ is a new sub-brand for the company and the Generation EQ is an all new electric concept. It features a dual-electric drivetrain and a theoretical max range of about 500 km.

over to deliver real performance at the wheel, with total power of up to 300 bhp.

Lexus UX concept

Toyota's luxury brand Lexus showcased one of the most polarising concept cars at the show. The UX concept with its extremely radical design seems to be inspired by sci-fi movies. The design is focussed on two concepts - 'inside out' and 'deconstructed'.

Honda Civic Type R prototype

The Honda Civic Type R is not really a new car for the European market, but this new concept from the company was really turning up the heat at the event. Flared wheel arches, aggressive stance and the large spoiler wing at the back, reaffirms that the car means business. There are modifications on the body to aid the aerodynamic performance of the car.

Citroen CXperience

The Citroen CXperience concept is another plug-in hybrid. It features a beautiful, totally outrageous design, complete with suicide doors. The insides are very premium with wooden paneling and nicely chosen materials. The main emphasis in the design is on human machine interfaces on any seat in the car. The internal combustion engine takes

Mitsubishi GT-PHEV

The "Go-green" slogan was reinforced by Mitsubishi's hybrid concept SUV, the GT-PHEV. Mitsubishi claims that it is made for all kinds of terrains, and to cover long distances. The electric motor alone can cover about 120km and according to Mitsubishi the combined range is about 10 times more than that. This car is likely to go into production next year.

Nissan Micra prototype

At the Paris Motor show this year, we got to see an all new, good looking Micra prototype, joining the ranks of hot hatches such as the Renault Clio and Ford Focus ST. The new version is slightly bigger and appeals to a wider audience. We just hope, the company takes this concept into production and launches it here in India. <http://dgit.in/PMSCncptCars>
