

A smart bathroom mirror

With everything getting smarter at your home, why should the bathroom mirror feel left out? <http://dgit.in/SmrtBthMirr>

GoPro halts HERO5 sale

GoPro has temporarily stopped the sale of its HERO5 camera models on Amazon.com in the US. <http://dgit.in/Hero5Sle>

The tale of incompatible cartridges, lost BIOS passwords and creepy shutdowns

One of our readers faces the infamous HP incompatible cartridge issue, whereas one of them comes across a series of bugs on his smartphone. We try to solve all their queries, one by one.

HP cartridge issue

I bought the HP Deskjet 1000 some two years back. I use my PC occasionally as I come home only on holidays. After the cartridges get over, I refill them and it used to work fine with the printer. But during holidays it gives me an error which says 'Incompatible Ink Cartridges'. Could you please help me with this problem as I have to submit my school project by mid-November. I have tried cleaning the circuit in the cartridges and also, read the column (H)heavy (P)rice.

– Arijit

A Hey Arijit, as long as you're using official HP print cartridges, you'll be fine and it should work normally. However, you can still try to reseal the cartridges properly and check whether

HP doesn't allow third party cartridges any more

the electrical points on the cartridge are fine. Since you haven't changed the cartridges and probably may have already take print outs, there shouldn't be any problem in compatibility.

The best way to determine whether it's an error in your cartridge or printer, is to use the cartridge on another compatible printer or using a new cartridge on your printer. This will help determine where the fault is exactly. If all else fails, we would recommend you to contact HP support right away.

Wrong boot priority

Hi team Digit, need your assistance regarding a system issue. We see a message on our monitor as "Reboot and Select proper boot device" or "Insert boot media in selected boot device and press a key".

System configuration:

- Operating system installed: Windows 7 Ultimate.
- Processor: Intel Core i3
- Motherboard: Biostar H61MGV3 ver. 8.0
- RAM: 2GB
- Hard drive: Seagate 320GB

Before this issue there was an error message on our monitor as "A disk read error occurred". We then tried to "repair" by inserting Windows 7 Ultimate but it couldn't repair it. Please send us the steps to fix this issue. Let me know if still need any additional information.

– Anil

A Hi Anil, it seems that this is an issue with your boot priority. Your primary hard drive on which Windows is installed, isn't being detected hence your system isn't booting up. You'll have to go to your BIOS settings and check whether the primary hard drive is set to the first boot priority order. If

not then change it to the first priority and you should be done.

This can also occur if you don't have an OS installed on that hard drive, but since you say that you already have Windows 7, this shouldn't be the problem.

Zenfone 2 on Android 6.0

I bought the ASUS Zenfone 2 last year. It's a better phone compared to my previous mobile phones but after recently upgrading to Marshmallow, I've come across the following problems:

1. Automatic reboots at least once a day
2. Every video player even inbuilt ones pop up an error reading "System UI Problem" where clicking OK closes the application. If I want to watch videos properly, I can't touch the screen while playing.
3. MX player and VLC player don't show video files on OTG USB whereas it was working in the previous version.

Please give solutions to me on this.

– Jayachandra

A Hi Jayachandra, we have observed performance drops and bugs in several other phones as well when they were upgraded to a newer version of Android. It seems to be the same in your case, and if you aren't really experienced in tinkering with your phone, then you should wait for an official OTA update from ASUS. If your System UI is crashing, then it affects the implementation of most of the apps.

But, if you do have experience, then we would recommend you to install a fresh and stock Marshmallow ROM for
