

Evernote for Mac bugged

Evernote for Mac may have been affected by a serious bug, causing data loss in certain versions on the Mac. <http://dgit.in/iEverntBug>

Q&A

the Zenfone 2. You could also try out custom ROMs.

Q Stubborn BIOS

I can't reset my BIOS password. I have an i5 processor and even though I've removed the CMOS battery, it doesn't reset. Please help me.

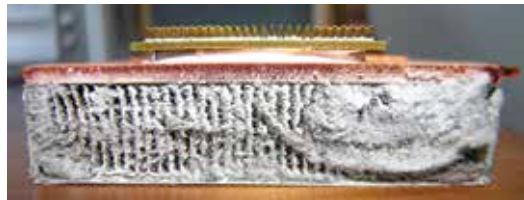

– Suganth

A There are several ways to reset your BIOS password which depends on how your laptop manufacturer has managed to secure the password recovery. First, the safest method is to contact your laptop manufacturer and verify that you're the owner of your laptop. They'll reset your BIOS password for you.

The other way to crack your BIOS password would be to use the BIOS Cracker tool in Hiren's BootCD. All you need to do is mount the image on bootable CD/DVD or a USB drive and run the program. Navigate to BIOS Cracker and you'll be able to reset your password.

Another crude way of resetting the BIOS password is shorting the CMOS jumper for 20 seconds. But if you aren't sure where the CMOS module is, avoid this method since you might end up shorting some other component. But

is what keeps me busy all day. I own a Lenovo Y50-70 gaming laptop with NVIDIA GTX 860M 4GB GPU. I bought that last year in February. From that period there have been many repairs in my laptop, about three times its HDD has been replaced. My issue is that while playing games, the laptop heats up pretty bad and shuts off without any warning. It happens while playing

A laptop that stays clean stays cool

FIFA 15. Though the hardware is pretty decent, I tried playing FIFA 17 demo here, the performance was pretty bad and then it went sweltering hot. Why is this happening with my laptop? Being a gaming machine it should be able to handle almost every game with ease. Last year, its gaming performance was pretty good actually but since last 6-7 months, its gaming capabilities have been a letdown. In addition to this, I've also cleaned my laptop and its fan too with all updated drivers of GPU and everything. Also I'm running Windows 10. Please help me guys! Please!

There are multiple ways to reset BIOS password

in case you do want to try it, check out some proper demonstration videos online. The best case would be to check videos for the specific model you have.

Q Gaming laptop heat-up

Hey Digit Team,

I'm an avid reader of your magazine for the past two years. All of you are doing some great stuff there. Your magazine

is what keeps me busy all day. I own a Lenovo Y50-70 gaming laptop with NVIDIA GTX 860M 4GB GPU. I bought that last year in February. From that period there have been many repairs in my laptop, about three times its HDD has been replaced. My issue is that while playing games, the laptop heats up pretty bad and shuts off without any warning. It happens while playing

A Hey Ankit, this is quite a regular query that we receive from our readers. Whenever you notice a forced shutdown while playing games, most of the time it's an overheating issue. Whenever the CPU hits a critical temperature, it shuts off as a protective measure to avoid any

damage. This can be easily solved by properly cleaning all the vents and fans of the CPU and GPU. And once you're sure that you've thoroughly cleaned those internals, you might even need to disassemble the CPU and reapply the thermal paste compound to ensure better heat dissipation. Hence, it's a healthy practice to clean your laptop every six months to ensure a longer life. **E**

Element of Success

Add a little attitude to all your presentations with iBall's 2.4GHz Wireless Presenter. Probably the most powerful presentation tool an executive will ever hold!

- 2.4GHz Wireless Trackball presenter device
- 6 Button with built-in laser pointer
- USB Micro receiver
- Use as mouse with Trackball & Left click button
- Left & Right button for previous or next slide
- On/Off switch to save battery life
