

Remove silent portions altogether from your recording

Normalize your recording with the Normalize tool

The noise removal feature does involve a few steps

You can change the tempo of your recording in Audacity

pace. In Audacity, you'll be able to do it right through the Change Tempo effect. As usual, go to Effect > Change Tempo and change the value of Percent Change by entering the value or using the slider. Use the Preview button if you aren't sure and when you've hit the right tempo, apply it throughout the track. This is a great tool if you tend to speak slowly while reading a script but want to use a faster tempo in your video or podcast.

to Effect > Equalization. Here, you'll be able to adjust the curve according to your preference of boosting the bass or treble. There are presets already available which can be cycled through the Select Curve dropdown list or manually tinker with the curve and save it. To start off, it's always better to hit Flatten and then change the curve. But then again, as with most equalisers, use your own judgement regarding the settings based on how it sounds.

set of effects together in one go. To add a new chain, go to File > Edit Chains and you'll open a window where you have an MP3 Conversion chain already added as

you can edit the parameters of that effect, which is the same as adding the effect to your track. And one by one you'll be able to add multiple effects in one single chain.

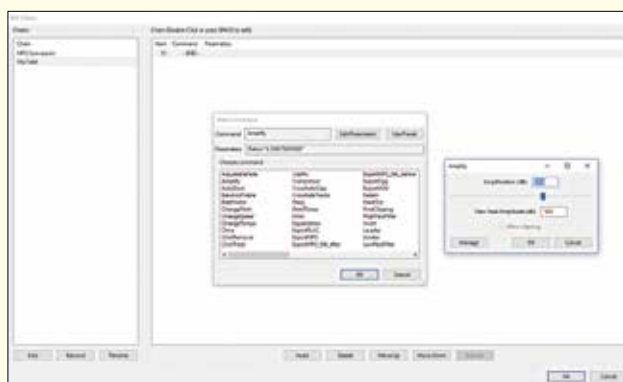

Adjust the equalisation

The recorded clip as mentioned above isn't always the best and lacks proper tuning for bass and treble. This highly depends on how good your mic captures the audio. If you aren't satisfied with the tuning, you can change the equalisation manually. Select the entire clip and head over

Using chains to apply multiple effects

When you're editing audio clips routinely with the same set of adjustments, then Audacity can automate all those adjustments with a single tool. By applying chains to tracks, you can implement a

Effect chains can speed up your audio editing by a huge amount

an example. To insert a new chain, select Add and give it a name for example Podcast. To add the effects, click on Insert and scroll through the effects and pick the one you need. Once selected,

Whenever you need to apply that chain to the entire or a selected portion of the track, go to File > Apply Chain, then select the desired chain and click on Apply on Current Project.
