Founded by PayPal's co-founder, Affirm has raised \$100 million from finance giant Morgan Stanley. <http://dgit.in/AffirmRaise>

**HP lays off 3k employees**

HP Inc expects to cut about 3,000 to 4,000 jobs over the next three years on the back of declining PC sales <http://dgit.in/HPIncLayoff>

# Lenovo Ideapad Y700

Performance with style but bulky

Price  
₹1,05,890

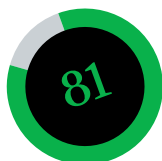

**T**he Lenovo Y700's design is high on gaming aesthetics with a brushed aluminium body and premium feel. It's built well, with pleasant materials. Weighing in at under 3 kg, the laptop is deceptively heavy, though, which is a bit of a surprise.

With a full HD screen, the Lenovo Y700's 15.6-inch IPS display is adequately bright, with vibrant colours and good contrast levels. While Lenovo hasn't gone for mechanical or hybrid keyboard with the Y700, the keyboard has good tactile feedback and an acceptable level of key travel. The trackpad is also comfortable with support for all Windows 10 gestures.

The Y700 comes with fast-paced internal hardware, packing an NVIDIA GeForce GTX 960M with 4GB GDDR5 memory to run most of your games at optimum settings. And just like the Ideapad 500, this laptop too features Intel's RealSense 3D camera which comes with a depth sensor.

The Y700 scored comparatively higher than the Dell Inspiron 15 we tested recently with similar specifications. The laptop comfortably handles popular as well as resource hungry games at 1080P resolution at 30fps with ease. For casual and enthusiastic gamers who prioritise portability and style over high-end gaming performance, you can't go wrong with the Lenovo Y700. The dual speaker with a bottom-facing subwoofer setup powered by JBL is one of the strong points of the Lenovo Y700.

# ASUS ROG GT51CA

Packing serious heat

**I**f you wanted a mean gaming machine with all the bells and whistles then the ASUS ROG GT51 is pretty much one of the prime contenders. There are multiple SKUs under the GT51 series with the higher ones coming with 2x TITAN X GPUs in SLI but the TITAN X is overkill for gaming and the 1080 is the more sensible choice. It boasts of a megatonne of performance thanks to perennially overclocked 6700K which runs at 4.3GHz and goes up to 4.6GHz at the push of a button. And aesthetically, it's a crowd-pleaser. The Aegis

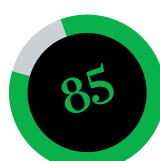

Price  
₹3,30,990  
(+Tax)

software allows you to play around with the LEDs and the overclocking presets. Certain elements like the ROG branding on the front stay red for obvious reasons but the rest is full RGB.

Externally, the GT51 features a geometric design and the internals are quite well thought out for ample airflow. In terms of performance, you couldn't ask for more. Samsung's SM951 NVMe SSD is more than enough to reduce level load time and the 64GB of RAM is overkill but with 2x 1080s in SLI you can game, render movies and use 3D CAD software with no hiccups. This is the most powerful configuration we've seen synthetically. Real world performance, though, paints a slightly different picture as most games aren't optimised for SLI so do a little research if you don't get good FPS in certain games.
