Soon to be launched Samsung's Chromebook Pro has been leaked along with specifications and other details <http://dgit.in/SsgChrPro>

Google's smartwatch

After Pixels, Google might be pushing for its 'Made by Google' smartwatches <http://dgit.in/GglSmrtW>

Zowie FK1+

For serious gamers, riddled by expensive local pricing

Zowie's mice are preferred by several professional players playing competitive matches. The FK1+ is part of the FK series which is directed towards building a basic but robust mouse for professional and regular gaming. This means that there's no fancy design or LED lighting, nor any software to control. The design profile of the FK series is similar to the Sensei RAW by Steelseries. There are three different models in the FK lineup, and they differ from each other in terms of dimensions only, in order to cater to different hand sizes. The FK1+ is suited for gamers with bigger hands (more than 18cm).

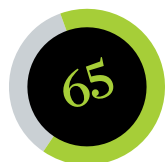

The sensor on the FK1+ isn't compatible on every surface, and hardly moved on smooth surfaces. Along with the mouse, we had

also received the G-SR mousepad which is huge. The mouse's feet and the mousepad's surface work great together, making flick shots and gliding easy. The optimal combination between a mousepad and a mouse is difficult to find. The corners and edges of the mouse are wide enough to capture lint from your mousepad, hence cleaning the pad regularly is advised. Servicing the mouse is difficult since you have to remove the PTFE feet to get access to the screws.

The FK1+ is a great mouse for gaming, thanks to the Huano switches which are harder than Omron switches to click, a subjective gamer preference. The Pixart 3310 sensor on board is really stable and accurate. The Lift Off Distance is really satisfying, better than the Logitech G100s and Roccat Kone Pure, while not as good as the Tt eSPORTS Level 10 M Advanced. One unique feature about the mouse is the position of the DPI switch which is below the mouse. Everything about the mouse makes it ideal for serious gaming, right from the sensor to the design, but the high local price affects the overall score and makes it difficult for us to recommend it.

Lenovo Vibe K5

A reliable budget smartphone

Priced at ₹6,999, the Lenovo Vibe K5 is powered by the Qualcomm Snapdragon 415 SoC and 2GB of RAM. Overall performance is respectable - regular apps like Facebook, WhatsApp and Google Chrome open smoothly, and even with five such apps open, switching is fairly smooth. In terms of gaming, there are noticeable lags in the in-game menus. The overall gameplay is good considering the price of the device. There are stutters, but games remain playable.

The 13MP primary camera is quite impressive for its price. It balances colours well, and although there is a lack in terms of crisp details, the Vibe K5 suffices for capturing impromptu moments.

Image noise, however, is persistent. Brightness in photos is slightly low, but the true-to-source colours help in fine tuning photos. The 5MP front camera, though, softens photos a bit too much, which can be slightly disappointing.

While Lenovo's own UI is not the best around, the display itself does well with colour balance and warmth. It is slightly dim, which hampers direct sunlight viewing. The front-facing Dolby Atmos speakers add to the entertainment, and the device is ergonomic on overall terms. In terms of battery life, you can expect nearly 15 hours of average usage.

While the Xiaomi Redmi 3s Prime is a better performer, the Lenovo Vibe K5 is a worthy contender in the sub-10k smartphone range.
