### Q Mid-range smartphone

Hello, and thanks in advance. I own a LeEco Le1s Eco which I bought from Flipkart. I have some issues with this phone such as bad low light camera performance, heating issues, and lag while playing some games (like Clash Royale which doesn't even hang in low memory phones).

So, I thought of changing to the Moto G Turbo (which I am getting for nearly 8.5k) or the Moto E3 Power (for 8k). So, can you help me deciding on which phone to buy?

—Lapung Seewa

A Hey Lapung,

It's unfortunate that your phone is facing problems. Since the phone was recently launched, we would recommend you to contact customer support. You might get a positive response in getting a replacement if the problems are genuinely acknowledged. Before that, try to identify if some app is causing the unnecessary heating, and start by factory resetting.

Whereas, if you're really inclined on buying a new phone, there are two factors to consider above. On the Moto G Turbo, you'll get a better processor with a lower capacity battery while on the Moto E3 Power, you'll get a less powerful processor comparatively but with a larger battery capacity. One unique and attractive feature about the Moto G Turbo is the IP67 certification which makes it dust and water resistant, and hence it should last longer. This probably is the highlighted feature which might help you in making your decision.

### Q YouTube commentary

Dear Agent 001,

I want to start a YouTube gaming channel as a hobby. So, I started searching for things that I would need for commentaries. Could you please suggest me a good microphone setup (mic, mic stand, cables and soundcard etc.) for my laptop under Rs 3,500.

Please don't suggest the Blue Snowball because I have a tight budget. Hope you will answer me and thank you in advance!

—Nikhil Vas

A Hey Nikhil,

If you're just getting started with commentary then you don't really need to invest in a standalone mic setup. You

can use your gaming headset's mic (if you have one). Once you get into the habit of doing videos regularly, then you can move on to a proper mic setup.

Nonetheless, if you're really keen on having a setup, you can go for the following condenser mic from Generic <http://dgit.in/GnrcCondMic> and the Robustrion suspension stand <http://dgit.in/RbstrnMicStand>.

### Q Point and shoot camera

Hello Digit,

I want to buy point and shoot cameras under 20k from Sony, Nikon, Canon. Please consider the following models and suggest me the best one:

1. Nikon Coolpix B500
2. Nikon Coolpix L840
3. Canon SX520
4. Sony H300
5. Sony HX200V

Please consider the various parameters like price (all are below 20k

approx) and the latest trend. Mostly I'm interested in Nikon Coolpix B500, but view finder and AA batteries are pushing me down. Can AA batteries be rechargeable and also can we capture images in the manual mode in Nikon B500? Please help me out in choosing the best point and shoot camera, and also I can afford up to 16K.

—Srikanth Kante

A Hey Srikanth,

You can certainly go for the Nikon Coolpix B500 since it gives you a better life, more focal length, and a longer optical zoom. The view finder is an important concern since it becomes tiring to use the view finder every time. But do note, that using the view finder drains the battery quicker.

You can charge your AA batteries if they are rechargeable. Although there is a manual mode present, you won't be open to many features.

### Q Cheap laptop under 10k

Hi Agent, I'm looking for a laptop (or a similar device) mainly for writing. I have to type for long hours and need the ability to write anywhere. So portability and battery duration are really important. My budget is 10k at max, and it can go as cheap as possible. And one more thing, although I know that at this range a good keyboard is not really possible, but is it really not possible at all?

—Arnab Shinde

A We recently reviewed something that is about perfect for your needs and your budget – the RDP Thinbook. At ₹9,999 it is right there in your budget, and it comes with genuine Windows 10 pre-installed out of the box. As a bonus, you could use a dictation software that would speed things up.
