

Playstation 4 Pro

Sony released a slightly upgraded version of its popular PS4, the PS4 Pro. But is it really worth the extra cost? <http://digit.in/ps4pro1>

StarCraft for AI

Google and Blizzard team up to make a StarCraft exclusively for AIs. <http://digit.in/Strcftai>

Run your business from a smartphone!

With an app available for almost every business need, now is the time to go truly mobile

Arnab Mukherjee

feedback@digit.in

Someone wise once went with a marketing campaign – ‘There’s an app for that’. I’m pretty sure whoever came up with the line would still be pretty amazed at the number of apps available today and their sheer capabilities. From apps that make you look like a dog to apps that are for your dogs, any major app store now contains a plethora of content that opens up a world of possibilities.

And those possibilities also include business. Smartphones have been used as professional assistants for some time now (‘Siri, what are my appointments for today?’ anyone?), but if there was any time that a smartphone could become your main business device, it’s now. With hardware capabilities defying expectations and input modes becoming more seamless day by day with things like better speech recog-

nition, it is time to ask yourself the question – is your smartphone all you need? Here are some apps that might push you towards a ‘yes’ on that one.

Productivity suite - Google Docs

Google’s Office suite comprising of Docs, Sheets and Slides is definitely one of the best productivity suites available on Android and iOS hands down. It is extremely easy to use and

Google Docs has got you covered

offers brilliant collaborative features. The interface is a lot cleaner and intuitive than competing productivity apps and follows Google’s design philosophy to the core. What’s more, they also work perfectly with Microsoft Office files, so if you’re worried about compatibility, don’t. Contrary to what people expect from Google products, this works perfectly well offline so you’ll never be disconnected.

Document capture - CamScanner

If you run a business, or even if you’re working in one, you inevitably have to deal with paper documents. Even the most advanced and tech savvy offices haven’t been able to go 100% paperless. But when it is all headed that way, does it make sense to invest in a dedicated scanner? Not if we have anything to say about it. Go for CamScanner, perhaps the most used scanning app around the world. So much so, that even the app’s
