Feature

watermark on documents scanned with the free version aren't a problem these days. It has single and burst modes for scanning. In both of these modes, your continuous scans are structured into a document that you can directly export as a PDF, share as images or even extract the text and share the text. There are some premium features that you can unlock for ₹130 such as high quality scans, optical character recognition, editing and sharing, more cloud space for your documents, unlimited

on the app with client name (it is not necessary that you need to have a client, you can put your own tasks with yourself as the client if you need to). Once you start working on something, you can hit the play button to add a new task under a specific project as the timer starts ticking. You can group similar tasks under the same heading to analyse them better. Talking about analysis, the report section shows you bar and pie charts about the tasks that you have timed on the app in a weekly,

an assistance. The app offers a very interesting and exhaustive way to manage your projects in the form of boards. Once you create a board, you can add others to it via an invite link or via their Trello ID. In each board, you can create multiple lists, each assigned to a certain topic perhaps. And in these lists, you can add each entry as a card. To each of these cards, you can add other members, attachments, to-do lists, deadlines and a label. On the other hand, if someone assigns

CamScanner's image processing technology is the best at what it does

Toggl offers insights which are very useful to track overall productivity

Trello is the only project management tool you'll actually need

folders, third-party cloud sync and more. For that price, this investment for your business is a no brainer.

Time tracking - Toggl

If you've ever worked at an MNC, you've probably filled a timesheet already and know how it works. But for those who haven't, a timesheet is a daily record of your tasks by the hour. It doesn't need to have a strict format but in general contains details of the tasks you have performed by the hour, and is usually analysed at the end of a certain period – a month – to figure out trends and efficiency at the workplace. Toggl is a brilliant app to achieve this result. At first glance, it appears as a simple timer. You can add projects

monthly and yearly basis. While the app itself does not offer you anything else, if you log into your account on the Toggl website you get accessed to much more detailed reports along with the option to add members to your team and create workspaces. Overall, this is a brilliant time tracking tool.

Project management - Trello

One of the major problems of working with a big team is coordination. To name a few things that are difficult – task tracking, deadlines, priority assignment etc. Even the best of management and leadership skills do need some assistance at times. In our opinion, Trello should be that form of

you a card, you can see it in the My Cards section in the menu. Each of the cards has a comments section where additional communication can be carried out regarding the tasks. If you think about the fact that any number of boards can be created depending on how you want to segregate your work (E.g Sales, Administration etc), and each of these could have any number of lists to tackle any tasks under these departments, Trello comes out as a really powerful project management tool in the disguise of a mobile app.

Accounting - Quickbooks

Accounting is an indispensable part of almost any business. Sadly, most of us aren't that good with numbers and
