

Vovu

Vovu is yet another minimalist puzzle game. But despite being like many others, Vovu still manages to differentiate itself because of its tricky puzzles. The game isn't much to look at, but that's how fans of minimalist design prefer it. The game loads fast and smoothly transitions between the menu and the levels, so you can keep playing endlessly with hardly a sense of time. It is a little like Loop, a similar game about connecting circles and lines. Here, the gameboard is an intricate circuit design with blue lines and orange semicircles. The rules for the

game are never set out clearly and are for you to figure out. There is a visual guide for the first 10 levels which will help you out however in the later levels there is a chance

that you might get confused. Another problem is the frequent appearance of ads. As is generally understood, these ads are important for the developers to make some money off of games they give away for free. If the ads irritate you too much, you can always pay a dollar in order to remove them and play without any disturbance. The soundtrack is peaceful and zen-like and is an absolute treat to listen to. There is a night mode with darker colours if you want to keep playing in the dark. The bright neon colours in both modes somehow seem like adequate design and placed against a stark white or dark grey background, tend to leave a lasting image. Vovu will be of special interest to anyone who has worked with circuits or possesses even the mildest of interest in the same. Give this funnily named game a try because it's worth it.

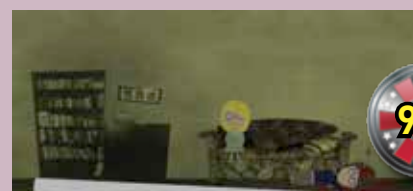

Trizzio

Trizzio is a quizzing app like QuizUp but here you have the chance to win actual prizes in the form of discounts and coupons. Trizzio gives you 10 random questions based on a wide variety of topics. Marks are awarded based not only on how many you answered correctly but also on how quickly you answered them. The user interface is pretty slick, with a sombre design free of any banner ads. The game has been developed by Trizzio AMPL which is based in Bangalore and the obvious Indian influence is visible in the questions and even the prizes offered. Every player starts with a rank near the bottom and quickly goes up the leaderboard based on how well they perform. At the end of the day, the leaderboard is reset and the rank at that time determines how many credits the player earns. Here, in-game currency gains real world significance in the form of Oyo discount vouchers or a gift card on Amazon and the like. While there is no doubt about how closely the game is linked to brands, it does seem sneaky when even some of the quiz questions deal with irrelevant details about a particular brand. This happens with an annoying frequency every once in a while. Other than that, most of the times the questions are relevant, from your interest area, and fun to answer. There is also a duel mode which allows you to challenge another one of your Facebook friends and earn credits if you manage to defeat them. Trizzio is very good at transforming close friendships into petty rivalry in such a way that you won't even notice when getting a higher rank than your friends took precedence over everything else in your life.

You.Me.Hell

You.Me.Hell is a game about difficult relationships. For those of you who have been in one, this might be relatable. For those of you who haven't – thank your stars. The game is about a girl who walks into a strange door in her basement and loses her way. She suspects that her boyfriend is in hell now and contemplates getting him back. Pretty relatable situation, eh? The graphics of this game are horrible. There is no other word to describe them. The art looks like it was drawn by someone who is 7. Strangely enough, that is one of the things that make the game endearing. Another one of the stellar features is the soundtrack. It is just one song, but that one song is beautifully written especially for this game. In fact, it is song that will keep playing in your mind long after you are done with the game. Like Enigma, this is also a point and click game. But this game is so completely off the rockers that Enigma doesn't come close to matching up. Our lost protagonist wanders across the hallways of hell, interacting with sassy characters with deep, hidden sorrows and insecurities. For example, there is a doll who is left on a rack outside hell because dolls are not allowed in hell. If you ask her why,

you will be treated to an absurd explanation that is better experienced than described. The puzzles require you to scan the game for objects that you can use and then use them correctly in the appropriate situations. The puzzles get a little difficult but never cross the line to become frustrating. The satire keeps the game wildly enjoyable throughout its 1.5 hour runtime. The game is not for children because it contains references to mature themes.
