

N

intendo is known for doing things its own way, and for the most part, that works for them. It's also great for us, the gamer community, to have something new and something fresh to do. We as gamers are more than happy to experience new things because the last thing we want is stagnation. Which is probably why we're so worried about replayability and originality in new games.

Anyway, back to Nintendo and doing things differently. Just look at the Nintendo Wii, when the Wii came out it was a huge success and Nintendo probably thought they hit the jackpot. But turns out, they were wrong about that, because simply having "Wii" in the name of your next console doesn't immediately guarantee success. Case in point, the Wii U, which in case you need a reminder all over again, did NOT do too well.

So why are we bringing this up? Well, everyone must've seen Nintendo's latest console's teaser, because if you haven't, you should. Now. Go watch it. Seriously. We'll wait. Finished? So what did you think about the Nintendo Switch? We'd say they nailed the trailer. That's a really good trailer, the best trailer, only Nintendo makes the best trailers.

But at the end of the day, talk is cheap. A good trailer doesn't automatically mean that the console will be successful. But if we can ascertain anything from the trailer, it's that Nintendo is definitely going in the right direction.

Dramatic Flashback

Let's talk a bit about why the Wii was so successful. 2006's 'Nintendo Revolution' as the people at the time were calling it – the Nintendo Wii did something no other mainstream console was doing. The Wii gave gamers a unique experience they wouldn't get anywhere else at the time. The "magic wands" or the "wiimotes" were something that had never been done before and it also brought motion sensor gaming to the mainstream. It's thanks to the success of the Wii that the PS Move and
