

most powerful. They don't want to be the most powerful. Don't get us wrong, being the most powerful is awesome. Having a high-end PC with the best components that defaults all the latest games to Ultra is the best feeling ever but you don't see a high-end PC in every other person's house do you?

That's the magic of the Nintendo Switch. It's not targeted at only the hardcore gamers but also at casual gamers, people who don't get time to game, people who aren't too interested in games and people who don't or can't commit the time. That's a majority of the world's population and by targeting them Nintendo is looking to tap into a potential treasure trove, and they're already turning heads, in a good way. In addition to that, not everyone can afford to get the best PC or the latest consoles.

This is also what makes the Switch stand apart from the other mainstream consoles in the market right now, whose main goal in life at the moment seems to be shoving as many pixels into your face as possible. Microsoft and Sony seem to be trying as hard as possible to match up with PC in terms of graphics, resolution, ecosystem etc(no offence console gamers). Now if we were console gamers (which we're not) we'd want to feel like we actually own a console, we wouldn't want to have to deal with all the hassle of drivers and settings and updates; we have a PC for all that. You know, like the good old days, just pop that cartridge in and get right to the gaming.

Wait, has this been done before? Sort of

Some of you might have noticed that the Nintendo Switch bears resemblance to Nvidia's SHIELD. In a way, they're both attempting to accomplish the same thing, blurring the line between home and portable gaming. Then there's also the fact that the Switch will be using Nvidia's Tegra processor, the same that was powering the SHIELD. If you think about it, SHIELD was like an experimental phase, and you can be sure that Nvidia will be taking all the lessons it learnt from the SHIELD and incorporating it in the

What do you do when you can't figure out which form factor to settle into? You make something that transforms dammit!
