

PhotoScan

PhotoScan by Google is a new application that uses your camera to scan and save old printed photos. <http://digit.in/GphotoSc>

HTC Bolt

HTC's new "Bolt" has Corning Gorilla Glass 5, IP57 water resistance and older Snapdragon 810. <http://digit.in/boltHtc>

Inbox

Hey Rohit, our customer service desk just told me that you received your mag. Sorry for the delay. We'll get it sorted from next time for sure. Wow yours is the second request to have SKOAR! as a separate supplement again. I think it's time I go bug our publishing director about this.

—Siddharth

I really like the *How to Survive a Nuclear Attack* feature from last month. This time the magazine got delayed by few days and it disturbed me. As it has already reached my Central Library but not at my home. Many times I read letters in the Inbox section complaining about the packaging. But I really love your packaging! It's really rugged one

and all contents are intact, fixed firmly in position. This is the reason I play with packed magazine for sometime and then open it.

I'd like to test different phone operating systems on my phone similar to what I can do on desktop. Please cover this topic since I want to know what are your views on it.

—Ravikant Joshi

Well yours is literally the first mail claiming to like the packaging. I'm hoping that means the production guys have solved the niggles with those pesky tapes. About trying out new OSes on your phone, the process isn't quite as simple as it is on the desktop. Phones are built around specific SoCs so you

start with the AOSP project, add the binaries and drivers for the SoC and then the drivers for each component specific to your phone. And if you are making a ROM for a different Android version then you'll need the source and then you have to compile them so that you can include them. If the phone manufacturer releases documentation the process is easier for devs but quite a few manufacturers tend to keep their documentation closed for proprietary SoCs. So there's a lot of painstaking reverse engineering involved in the process. Which is why you have a lot more ROMs for phone models which are more open as compared to those which use proprietary hardware.

—Mithun

LETTER OF THE MONTH

I am a student studying in grade 12 and am a big fan of Digit. I have been reading the magazine since the past 11 months and I am simply in love with it. I thought I'll share my experience: since i live in a hostel (remember the hostel edition? I liked it the most since I could relate to it with my current situation in the hostel) I read the magazine in the library of the school. It's very difficult for me get my hands on the mag as many students are behind the magazine. So I start bugging the librarian from the 1st of every month so as to get the magazine first and I am pretty successful in it. I love to open the packing of the magazine and read it firsthand. Now coming to the "review" of the magazine. It is simply THE BEST.

Since the magazine is well equipped with not only info about latest tech but also comparison between products, solution to various computer problems, tech news and so much more, it is the complete package for the geek (keep it up!). What i love about the magazine the most is the detailed description of all the tech which is not that easy to find in other tech magazines along with the price tags. The short funny captions under each picture tickles me. Don't stop doing that and try to add some more of it if possible!

Being an enthusiastic gamer I simply love SKOAR!. It is like the heart of the magazine (for me) and I just can't stop waiting for reviews about new games from the experts (you guys). The most reader friendly part of the magazine would be the Bazaar section. I am going to buy a new phone and laptop after my board exam and I know that it is the best place to get the best comparison between top products and their prices (love it). I am very

curious about AGENT001. He is a real computer problem savior (Who is he actually?). Overall the magazine is the best I ever went through. The DVD also packs a great punch with the ultra high resolution trailer videos and software but I also have some suggestions for the magazine (to make it even better).

1. The poster paper quality could be thickened just a bit because it tends to tear easily.
2. SKOAR should be a separate magazine. It gives it a sense of identity.
3. The Bazaar section could have even more products to choose from.
4. There could be more memes so that the reader is entertained more.

Overall the magazine is flawless and the effort you guys put in is worth even more. I wish to be a part of the team one day and want to thank you guys for making tech even more beautiful.

Keep up the good work.

—Kaushik Saraiya

Hi Kaushik,

Always nice to hear from young readers like you. Your suggestions are quite good and we'll try to implement all of them. Improving the paper quality of the posters is something we've been trying to budget for a long time. Since you are a reviews enthusiast you'll definitely love Zero1 Awards. As for more memes, we're a little conflicted. Aren't you bombarded with enough memes online already? Something tells me you are going to love this time's Escape section.

—Siddharth
