

DESIRE

TAKE MY MONEY!

Here is where we keep an eye on crowdfunded projects that will make you go 'Shut up and take my money!'

ICE- Personal Security

The ICE is a handy little device that works to make you safer on the streets. On the outside, ICE looks like a simple accessory; it doesn't stand out too much and you can hook it onto your bag or keychain. Then it just hangs around looking pretty, until you're in a situation where you actually have to use it. Once you click on ICE, it ensures that you always have a guardian when you need one. ICE immediately reached out to the

police, all your personal emergency contacts and ICE's own global network of guardians. You simply flip the lock and click on the disk which immediately sends out a message to your guardians. Additionally ICE can also be voice activated with a safe word of your choice if you use a smart watch. It's good to know that if you're ever in a prickly situation, aid is just a click away. You can support ICE by backing them on Indiegogo.

Bonjour

Waking up in the mornings is always a hassle, especially for us. Not only is oversleeping unhealthy, it messes up the rest of the day as well. What you need is Bonjour, a smart alarm clock that also doubles as a smart personal assistant thanks to its Artificial Intelligence. Bonjour is a voice-controlled, A.I enhanced alarm clock. It has a human voice is also apparently well mannered, so waking up should be a rather pleasant experience. Bonjour is a smart alarm clock, that means it can adjust your alarm timers on the fly taking into consideration factors like occasion, traffic, weather etc. Bonjour acts as a personal assistant as well and can schedule things for you and order cabs and such for you. In addition to all that the Bonjour also tracks your fitness and integrates well with home automation and smart home devices. Bonjour learns and gets smarter everyday by studying your preferences and learning new requests. If you want to get your hands on this smart alarm clock, look for Bonjour on Kickstarter.

Freedrum

We're all expert air drummers. You don't have to be embarrassed, we all do it. What if we told you that you could actually carry a drumkit around with you in your pockets? That'd be pretty neat right? Freedrum is exactly that, a virtual drumkit that fits in your pockets and you can carry around with you! All you need to do is slip your sensors onto your drumsticks and pair them with your smartphone. That's it! You're now carrying a virtual drumset around and the best part is that you can just plug in some earphones and nobody's going to complain about your drumming skills. If you're someone who's aspiring to to play the drums, these are a great way to start without actually having to buy an actual drumset, which can be quite expensive. It's also a great way for veteran drummers to be able to practice anywhere and at anytime. Head on over to their Kickstarter page if you wanna back them and maybe get a pair of Freedrums yourself.
