

Matrix PowerWatch

Smartwatches sure are nice, but you know what would make them better? If you didn't have to keep taking them off to charge them. The Matrix PowerWatch never needs to leave your wrist for it to charge. The PowerWatch runs off your body heat. What about when you're not wearing it then you ask? When you take it off it goes into sleep mode after

saving your data to memory. Put it back on your wrist and it's right where you left it when you took it off. The PowerWatch has a power meter on it that tells you how much electricity your body heat is producing. Since the PowerWatch runs on your body heat, it comes as no surprise that it's good at counting your calories as well, considering that your body burns calories to generate the

very heat it runs on. In addition to all this, the PowerWatch is a smartwatch at its core with most of the functionalities you'd find in a smartwatch with added ruggedness thanks to its aircraft-grade aluminium build. The PowerWatch is estimated to start shipping by July next year. Back them on Indiegogo if you're hoping to get one yourself.

SPUD

No, we're not talking about potatoes here. The SPUD is a rather unique product, they've dubbed themselves "the world's first large AND portable display." The SPUD is a 24-inch display which you can fold up like an umbrella and carry around with ease. You can connect the SPUD to a smartphone, tablet, or laptop using an HDMI cable or wireless adaptor for an easy and instant large screen. With the SPUD you can enhance your visual experience on practically any device, no matter what you're doing. A

24-inch diagonal display is no joke. Not only is it larger than most smartphone screens, obviously, it's also up to 4 times larger than most laptop screens. Another advantage is that the SPUD uses a flexible polymer instead of glass, this polymer doesn't get cracked or chipped, and if it gets dirty, you can easily just wash it. Sounds pretty cool and convenient right?

Check the SPUD out on Kickstarter, if you wanna back them or maybe even get a SPUD of your own. We know we're considering getting one.

ZapBox

ZapBox utilizes your smartphone to create a room-scaled mixed reality to mess around in. How it works is the ZapBox app displays a live feed through your smartphone's camera, through which you can see what's around you. And by what's around you here we mean the virtual objects around you. These virtual objects are anchored to the real world; you can change your viewpoint simply by moving around them. The ZapBox also comes with a pair of handheld controllers which allow you to actually interact with these virtual objects. Being able to manipulate virtual objects comes with benefits like being able to paint in a 3D space, virtual mini-golf, and even playing virtual instruments among other things. If mixed reality is something you want to try after reading this, go visit ZapBox's page on Kickstarter to back them and get one for yourself.

Sevenhugs Smart Remote

The Sevenhugs Smart Remote is a remote for ALL of your smart devices. In their words "Control. Anything. Simply". With the Smart Remote you can instantly control a wide range of devices from TVs, to media players, speakers, lights, and thermostats etc to name a few. The Smart Remote display automatically adapts to whatever you're controlling at the time. Even devices in other rooms can be connected. You need simply point in the direction of the device and control the said device. It also allows you to conveniently pick the device you want to control when they're together in one spot, such as with a TV and a speaker beside it. The Smart Remote can control any device via WiFi, Bluetooth and Infrared and is currently compatible with over 25,000 devices, with more being added everyday. You can find the Smart Remote on Kickstarter.
