

DESIRE

MOBILE WATCH

Stylish, glamorous and interesting smartphones are always on the horizon. We take a closer look at what's hot in this space...

LG V20

The LG V20 is hands down LG's best phone so far. It's got a 5.7-inch primary QHD IPS display and an always-on 2.1-inch ribbon display on top for info like time, notifications etc. It'll be using the latest Android OS, the Nougat OS. Its other specs include a Qualcomm Snapdragon 820, 4GB of RAM, an Adreno 530 GPU, a 20MP main camera and two 8MP front facing cameras. As for storage, the V20 comes with 64GB of internal storage, with the option to expand via microSD cards. In addition to all of the above, the LG V20 is fueled by a massive 4000mAh li-ion battery. So if you're looking for a prime phone with powerful specs and budget is not the issue, the LG V20 is definitely a good choice. It's expected to cost close to ₹60,000/- when it hits the markets. What would be interesting is to see how the ticker display on this one works out. Smartphone manufacturers like Samsung and others have tried to add to the traditional display form factor in their own ways, with Samsung's Edge range and more recently, the nearly edgeless Mi Mix.

ASUS Zenfone AR

ASUS CEO Jerry Shen has revealed that Asus is working on the next Google Tango smartphone. The device is being dubbed the ASUS Zenfone AR and will most likely be revealed at CES in January next year. This will be the second device to use Google Tango after the Lenovo Phab2 Pro which was announced earlier this year in June. If the name didn't give it away, Google Tango focuses on the AR experience, or augmented reality, and we can most likely expect the Zenfone AR in the second quadrant of 2017.

Samsung W2017

The Samsung W2017 is being called the high-end flipper for a reason. This phone comes with two 4.2-inch Full HD AMOLED screens on either side of the flipper. It's powered by two dual-core Kryo processors, which clock in at speeds of 2.15GHz and 1.6GHz respectively. The phone's got 4GB of RAM, an Adreno 530 GPU, a 12MP main camera and a 5MP front camera, 64GB of internal storage – which can of course be expanded with microSD cards – and a 2300mAh Li-ion non-removable battery. As for price, the Samsung W2017 is expected to cost almost ₹1,00,000/- when it hits the markets. Yikes, pricey! Will the W2017 make the flip-phone cool again? And if it does, will this be your next luxury device?
