

GREED

EXAMINED

Some very cool products come to the Digit Test Centre which don't really fit into the standard product categories that we review in the Bazaar section. We write about them here mostly to make you turn green with envy.

Samsung Gear Fit 2

Best of both worlds

With the Gear Fit 2, Samsung is aiming for the middle ground. A fitness device that can do more than just track activities. It sports a metal body that blends into the rubber strap, making it look more like a bracelet than a watch. The two buttons are used to go back or access the main menu. The Gear Fit 2 fastens via a single prong and the setup feels quite secure to begin with.

The wearable is quite light and you can even sleep while wearing it. The device also has an IP68 certification. The 1.5-inch AMOLED display is crisp and colourful, while the TizenOS is fast and fluid to use.

By default, you are shown the time alongside floors climbed, steps taken, etc. You can also choose more watch faces. Swiping takes you through the different screens. While the UI transitions are fluid, for some reason the automatic screen on feature takes a little time to turn on.

Installing the Fear Fit 2 app on your phone will let you pair the wearable with your smartphone. This will let you download additional apps and watch faces.

Notifications take a few seconds to appear and you have the option of replying via a few set responses. Incoming calls are also displayed, but you can only disconnect them.

The wearable can be used without being connected to the device as it can track and store activities within itself. You can also store music and listen to them via a bluetooth headset. Before starting any exercise, you get a little demo of what you are supposed to do.

This is handy for those who need help, or are starting to exercise without going to the gym. The Gear Fit 2 can also track your sleep automatically. However, the floor counter didn't work too well. The 200mAh battery is good for about two days of battery life.

The Samsung Gear Fit 2 is a good device for those looking for an activity tracker that can do more than just track activities. While there are many cheaper fitness trackers you can purchase, not all of them can offer the extra set of features you get with the Gear Fit 2.

Pentax Papilio II 8.5x21 WF Binoculars

Macro, here we come!

Binoculars are a fun thing to play around with. Peering around the office trying to count the strands of grey hairs atop of your colleagues' head is often a fun activity. The Pentax Papilio II 8.5x21 is a pretty decent beginners' binoculars. The magnification is more than sufficient for activities like birdwatching, safaris and the aforementioned grey-hair hunting. Being a Porro type makes the Papilio II very compact and you can easily stuff one in your khakis. And with a price tag of ₹10,555 you're getting more than what you've paid for. The Papilio II uses prisms made out of BaK4 which

is pretty much the best thing used in commercial grade binoculars. Even the minimum focus distance is 50 cm, which works out quite well if you wish to view things in macro. The only drawback? Well, the exit pupil is only 2.47 mm wide which does take a little getting used to as

you do see a bit of the barrel and peering at objects in the night is a teensy bit difficult as there's less light coming in. But that's a compromise you make for a compact design. You can always opt from their S series to get better magnification and a wider objective diameter.

SPECIFICATIONS

Magnification: 8.5x | **Objective diameter:** 21 mm | **Minimum focus distance:** 50 cm | **Exit pupil diameter:** 2.47 mm | **Eye relief:** 15 mm | **Prism coating:** BaK4 | **Weight:** 290 grams | **relative brightness:** 6.3 | **Field of View:** 6 degrees.
Price: ₹10,555
