

GREED

DROOL MAAL

Get your drool on and behold some of the fanciest, ostentatious and drop dead gorgeous things money can buy. Droolworthy?

Thanks to the modular design, owners can replace or upgrade any part of the drone as they see fit when they need arises. This is a very useful feature because of the nature of drone flights. Even if you might consider yourself the best drone pilot in the world, you can't really predict the flight path of birds or a randomly thrown ball with 100% accuracy.

The Drones come with small detachable winglets that keep the weight at a low 1250g, and that's including the camera, which is amazing. This also makes the L-A series drones much easier to transport thanks to their compactness. And the ease of transportation, which is rarely found in the high end drone segment, makes these perfect for accompanying you on your next adventure.

All of the aircraft / drones are controlled through the OperationCenter software for Windows 10. The new OperationCenter v2 software comes with lots of new features and an improved UI for more ease. These drones don't come cheap though, the launch prices for the L-A drones starts at \$3490 (₹2,40,000/- approx) for the LA500 to \$7990 (₹5,45,000/- approx) for the LA500-AG, so if you do plan to become the next drone overlord, better start saving up now!

Lehmann Aviation L-A Series Drones

Lehmann Aviation's new L-A Series is made up of three fully automatic drones, each of which perform three major applications. The LA500 is a high-end drone designed mostly for professional use and the high-end consumer, the LA500-AG is meant for agricultural purposes and lastly, the LA500-RTK is meant for highly accurate mapping and DEM.

The new L-A series has been completely redesigned. The drones are made of aluminum, carbon fibre and EPP foam. It's also got a new modular design along with more rugged and reliable systems, and a powerful new autopilot. The new L-A series is much easier to use thanks to these new features.

URWERK UR-105

The UR-105 "Raging Gold", as Felix Baumgartner – URWERK co-founder – explains, is the result of gold's lure on him. The UR-105 Raging Gold features a shield of red gold on its titanium body. On top of that, the shield itself has a pattern carved into it which makes it a pleasure to touch as well. The pattern is derived from the hobnail motif "Clou de Paris," a pattern that was at a time popular in high-class watches.

URWERK watchmaking revolves around one particular concept, that of the wandering hour principle, where each hour travels across a 60 minute arc. This method makes telling the time easier, where a mask on the watch face hides the hours that have already finished their 60 minutes. The UR-105 also makes use of this concept, in addition to the all latest developments at URWERK. The UR-105 utilizes the finest of craftsmanship and the feeling cannot truly be described, only felt with the watch itself in your hands. Isn't that the case with all true craftsmanship? The brilliant finish combines with the unique timetelling brilliantly.
