

CAMERAS – DSLRs (FLAGSHIPS)

Shooting in low light conditions was never this good

Full-frame DSLRs are imaging tools of pride - illustrious shooters that exhibit the very best capabilities of dedicated imaging devices. Over time, full-frame professional DSLRs have picked up more features to make them versatile. The present crop of full-frame cameras now flaunt features such as 4K video recording, touchscreen LCD viewfinders, wireless connectivity and more.

This year's crop include increasing counts of continuous shooting frame rates, faster focusing and even better sensors, making the cameras perfectly suited for multiple genres of photography, including wildlife, astronomy, sports, fashion and more.

For first-time full-frame users, the key to deciding may lie in the peripheral features, along with the ease of holding and carrying the camera. With all of this in mind, our 2016 Zero1 awards celebrate the best of DSLRs by acknowledging the excellence they present in terms of imaging.

ZERO1 WINNER

Nikon D5

The Nikon D5 is nothing short of an imaging monster. The new 20.8-megapixel full frame sensor is coupled with the new 153-point AF system that takes some time to get used to, but when you do, the results are absolutely delightful. The new image processor, coupled with higher buffer size, allows for 12fps continuous shooting in RAW.

The new AF system, a glimpse of which you also see in the Nikon D500, is class-leading in terms of speed and precision alike. The new system now allows you to select a single point of focus on an erratically moving object, and the camera does the remaining bit for you, tracking subjects with incredible precision and response. It is also far superior in low light object tracking, and allows you to shoot at wider apertures for shallow depth of field, as you will not need the extra depth to focus while recomposing, any longer. This is also thanks to Nikon's new colour array optimisation and a new RGB+IR metering sensor.

In terms of imaging performance, this beastly camera can shoot up to ISO 3 million. The ridiculous figure is actually usable as well,

Nikon D5

Price: ₹4,45,950

Canon EOS 5D Mark IV

Price: ₹2,54,995

and the D5 shows its class in high ISO shooting at above ISO 102400. It offers class-leading ISO dynamic range, leading to more accurate colours, deeply detailed shadows and ample frame lighting in diverse situations.

This is the ace, and we cannot help marvel at solid imaging performance in terms of sharpness, details and full-bodied colours. High dynamic range and speed of shooting are aided by superior AF and ISO performances, and abysmally good battery life makes the Nikon D5 the best full-frame camera in the market today.

BEST BUY

Canon EOS 5D Mark IV

Canon's 5D lineup has been incredibly successful, and ease of usage is at its forefront. Continuing on this note, the EOS 5D Mark IV now presents a lighter, friendlier body, intuitive menu arrangements, and the stability of the full-frame sensor and improved Dual Pixel AF. Details are significantly higher, and subject sharpness is crisp and precise. This is combined with wonderful reds and even competent yellows, along with sublime ISO invariance that merge with excellent dynamic range.

The 61-point AF system pales in front of the Nikon D5, but the 5D Mark IV still does its job razor sharp and fast.

The Canon EOS 5D Mark IV is our 2016 best buy for full-frame DSLRs, aided by its performance potential, along with an easy-to-use body, good battery life, native wireless connectivity and a full touch input display. **d**
