

Gold Trump iPhone

This special edition gold iPhone with a portrait of Donald Trump at the back costs about \$3,008. <http://digit.in/iphntmp>

YouTube Kids

YouTube finally launches YouTube Kids in India which they had announced on February 2015. <http://digit.in/utbkids>

HOW TO GET ANDROID NOUGAT FEATURES ON ANY ANDROID SMARTPHONE

Even if your phone is not scheduled for an update you can still get all the features. And for the rest, the wait is over.

Swapnil Rastogi

Android has reached its Nth edition – Nougat. And like every time, it suffers from fragmentation. But if you're part of the majority, we got your back.

Android is a diverse mobile operating system. More mobile devices run Android than any other OS. But this seemingly boon of the OS is actually proven out to be a bane. This fragmentation causes all sorts of software development issues. Both for Google itself and the app developers. Every software is meticulously crafted to

operate optimally on as many devices as possible. But how far can someone design for a sea of shoals? That's when developers lock their software only for the selected few they deem fit. And every time Google does that to its latest OS, the ones that get cut off, run around in frantic desperation to get all the sweet juicy new features. Some even buy a new device.

Now because not everyone can afford to be one of those 'some', third-party developers cook up their own concoctions to act as alternatives to the many new features. So, obviously the same has happened to Android Nougat and we're here to give you a dosage of everything you can do to achieve the Nougat level without actually being considered fit for it.

First up, we have the things you can get without rooting.

Out of all the updates, Nougat got over Marshmallow, replicating most of them requires root access. And the ones which don't are actually the things exclusive to Pixel devices. This includes revamped icons, phone app, wallpapers app, Google pull and swiping up for app drawer.

So, now the question boils down to what you can replicate from a Pixel device to a non-Pixel or even a non-Nougat device? Quite a lot actually. In fact, a lot of it is officially provided by Google themselves.

Yes, they made some things exclusive to Pixel devices, but with

this workshop you will be able to enjoy few of them in your non-Nougat phones.

Multi-window

One of the most priced features of Nougat can be used on non-Nougat phones too. Well, not exactly in the sense of multi-window. An app called C Floating enables you to float your widgets around. This won't give you the same level of usability as multi-window, but that's the best you can get without rooting. If you liked the app, do know that a lot of it is locked behind an in-app-purchase of ₹130.
