Corsair K70 RGB Rapidfire

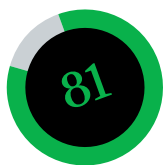

A new leader in mechanical switches for gaming

Price
₹13,999

Corsair has once again exclusively partnered with Cherry to launch a new type of mechanical switch called the Cherry MX Speed with the K70 RGB. The Rapidfire is no different from the K70 RGB, the keys being the only difference and that's what we'll be focusing on here.

Shifting from tactile switches to linear switches takes a day or two to adjust because of the absence of the tactical bump in the

switch. The Speed is close to the Reds with the same actuation force of 45g. The change here is the reduced actuation distance of only 1.2mm rather than the comfortable 2mm on the Cherry MX Reds. While this makes it impressive for gaming towards incessant tapping and spamming, it might not sound like the best choice for typing. But after a couple of days, we found it comfortable enough to type with. The short key travel of 3.4mm enables you to go on typing without exerting much stress on your fingers. We can definitely say that we now have a new favourite for mechanical switches, previously held by the Cherry MX Silent.

Although, you get all the premium features on the K70, including the Corsair Utility Engine to control the RGB lighting and firmware updates, it all falls down to whether you're willing to spend a truck load of money on your next mechanical gaming keyboard.

HP Pavilion 15-bc008TX

For gamers and regulars alike

Price
₹96,200

Gaming laptops are usually clad in black, with edgy designs and an imposing presence. However, there's a second kind of gaming laptop, the kind that hides in plain sight. The HP Pavilion 15-bc008TX is one of those.

Like most Pavilion laptops, this one also has a

plastic build. HP has done a good job with this one as the whole machine feels quite robust. The 15.6-inch display on this machine is one of the better display we have seen in this price category.

While the typing experience on the laptop is good, we would have loved a little more resistance as it suits gamers.

The laptop may not be aimed at gamers, but it's a darn good entry level gaming machine. The HP Pavilion beats dedicated gaming machines, like the Asus ROG501VW and the last generation HP 14-j008tx.

In addition to that, the HP Pavilion 15-bc008TX has undoubtedly the best battery life among its peers. Under normal usage, the laptop served more than six hours of battery life.

Overall, the HP Pavilion 15-bc008TX is definitely a laptop you should consider if you need a machine that can handle all kinds of heavy software, while also indulging some casual gaming habits.
