

BlackBerry DTEK60

Too little, too late?

The latest BlackBerry smartphone to run on Android is the DTEK60, and

it is actually a fine effort by BlackBerry. Powered by the Qualcomm Snapdragon 820 and aided by 4GB RAM and 64GB native storage, the DTEK60 performs in line with 2016's flagships. Everyday usage apps load without a hitch, and graphics performance is fluid, too. This is further complemented by a premium metal-and-glass build, two front-facing speakers and two rear-facing tweeters, and a fairly decent camera as well.

Graphic-intensive games run smoothly, without

₹46,990

rendering any discernible frame skips. Battery life is a letdown. The DTEK60 loses 16% power in 30 minutes of gaming, which is rather steep. It also takes over two hours to charge, much longer than most phones out there. The 5.5-inch, 2K resolution AMOLED display delivers crisp colours and sharp contrast that makes colours pop, and touch response is fluid. The DTEK app enhances security by alerting you every time an app accesses a feature out of order - a neat feature. The 21MP camera is reasonably decent, shooting good colours with ample sharpness. The 2-speaker, 2-tweeter setup also delivers stellar surround sound that is among the best in present day flagships.

All of this combines to make the BB DTEK60 a fine Android flagship, but it may just be too little, too late for BlackBerry.

Honor 8

Defeated by pricing

With the Honor 8, Huawei is bringing the dual-camera spec from the Huawei P9 to its budget brand. However, it will be up against the mighty OnePlus 3. So the Honor 8 has to bring a lot more to the table than just a good camera.

This is a good looking smartphone with a glass and metal build. The chamfered edges make it comfortable to hold. However, the phone is slippery. It is also pretty compact thanks to the 5.2-inch display and the comparatively thin bezels.

The display is good and while the colours aren't as warm as an AMOLED display, they aren't particularly cool either. The viewing angles are fine with a slight shift when viewing from acute angles.

Like the Huawei P9, you get two 12MP Sony IMX286

Price
₹29,999

sensors, but sans the Leica branding. In daylight, the colours are true to source with good detail and the Bokeh mode does fairly well at creating shallow depth of field. You also other features like Pro Mode and Light Painting.

Games run smoothly enough, but there is a heating issue that affects performance. The phone shuts down the high performance cores when the temperature reaches 40 degrees.

Battery life of the phone is just about enough for an average work day. You also get an Ultra Power Saving Mode, which can dramatically increase battery life by only running basic calling and messaging.

The Honor 8 is a good smartphone on standalone terms, but is overshadowed by the OnePlus 3 in almost every aspect. Buy it only if a dual camera phone is your priority.
