Industry Connect

India through Canon's eyes

Wondering what Canon thinks about the Indian market? Read on.

Mithun Mohandas

mithun@digit.in

d How is Canon's PhotoMarathon faring in India as compared to the other countries in South East Asia?

Eddie: This was the 7th edition of Photomathon in India and we are happy to witness the popularity this event has gained over the years. The ever increasing number of youngsters taking up their cameras and unleashing their creative self is reassurance to our constant efforts towards encouraging a culture of photography in India.

We feel confident and extremely proud with the photographic capabilities that Canon Photomathon managed to attract this year which is immensely innovative and at par with the global standards.

Looking at the success of the platform, we intend to scale it up and engage enthusiasts from different parts of the world.

d Could you shed more light on the Indian community as per Canon?

Between the professionals, amateurs, DIY enthusiasts, absolute beginners, etc. How is the Indian community different as compared to the rest of Asia and as compared to the world?

Eddie: We have seen a lot of change since we first started Photomathon in India in the year 2009. Initially, it was more of professional photographers who participated in this live photo contest, gradually over the years we have seen photo enthusiasts, beginners and hobbyists who have started participating. This year we introduced student's category where students from various schools participated.

Mr. Eddie Udagawa, VP, Consumer Imaging and Information Center, Canon India

d We know that sales for DSLRs, Mirrorless and Point and shoot have been falling over the last decade globally. Is India exhibiting a similar trend?

How is Canon adapting to this drastic change in the consumer market?

Eddie: India has seen a growing trend in the DSLR segment. With the launch of our new cameras in the market in 2016, we see huge potential from our entry level camera EOS 1300D and our mid-level camera EOS 80D. We have recently launched our flagship model EOS-1D X Mark II and EOS 5D Mark IV which are high end professional cameras and we see a huge demand for these cameras.

So far, as the Compact cameras are concerned, Canon has been focusing on the current compact camera portfolio especially in the Zoom range category and high end premium compact cam-

eras. A better zoom and image quality; focus on HD video recording and low light photography are some highlights.

d With the demand for better picture quality sans noise, rolling shutter effect, etc., will we see cameras with high performance CCD sensors in the consumer segment?

Eddie: The rolling shutter effect can be caused by a variety of reasons, use of a CMOS design being one of them. However, these days, due to improvements in hardware fabrication as well as software the effect of rolling shutter is minimal. Our advanced DIGIC processors are also able to correct this phenomena. Thanks to the many benefits CMOS sensors enjoy over CCD sensors, CMOS sensors are being used not only in DSLR cameras but in smartphones as well. **d**
