

Unwind

2016 really wasn't the upbeat year we were hoping for, so here's the Pessimist's Guide to 2017. Just in case.

NEW YEAR'S RESOLUTIONS FOR GEEKS AND HOW TO KEEP THEM

IT'S THAT TIME OF THE YEAR AGAIN, WHERE PROMISES TO ONESELF
ARE MADE TO BE BROKEN. BUT NOT ANYMORE!

Arnab Mukherjee

arnab@digit.in

New year resolutions have become an annual joke for most of us – we make them with total dedication on day one of a new year and sometimes fail to keep them the very next day. Rather than looking at them as a cultural phenomenon that you need to follow, seeing them as an effective way to change things in your life is a much better thing to do. And if you allow technology to help you keep them, there is actually no way that you're going to fail. Here are some resolutions that geeks should find easy to keep with the help of technology.

I will keep track of my money

One of the most popular resolutions – one that even fails as popularly – is

the one we all make, to save money. Somehow, even though we try to keep track of every single rupee, at the end of each month we have to get really lucky to have some money left with us. Well, why does this happen? Mostly because at any given point of time, we have to rely on our mental estimates to track how much money we have. In fact, relying on mental estimates not only botches up the overall number but even leads to misconceptions regarding which area of spending needs more focus.

There are too many money management apps out there for anyone to even try to complain about not having what they want. Whether you want location based tracking (Wally+), or something that supports family input (HomeBudget), or bill splitting features and more extra features (Walnut) there is literally something for everyone. So the next time you think about saying that you can't save - have a look at your smartphone.

I will not pre-order!

This cannot be stressed enough - do not pre-order games. Or devices, for that matter. Companies that make these things are repeatedly using pre-order as a mechanism to push their product even before actual launch. What does this do? It leads to a situation where a lot of people get a product without knowing if it's
