

Elon Musk is the man!

Real life Iron Man just beat Mark Zuckerberg and Steve Jobs as the most admired Tech Leader <http://dgit.in/ElonDaMan>

Back from the dead

KickassTorrents, the popular torrent site was revived by the original staffers <http://dgit.in/KatsAlive>

IMPS infrastructure and payments are as easy as sending an email. There are tonnes of UPI applications to choose from because UPI is bank agnostic in terms of which app you use.

I will learn one new language this year

One of the most interesting skills that one can pickup over a year's time is a new language. You might think that there's no point in learning another language like French, Japanese, Spanish, etc., but then you'd be very, very wrong. Learning a new language opens up doors to a lot of things – meeting and interacting with new people, the ability to watch movies and read books in that language, and once, someday when you travel to that country you won't be a tourist, you'll be a traveller. To learn a new language, there are apps like Duolingo which have gamified the process. Duolingo takes you through an entire course where you earn points for your achievements in the learning process. It's a lot of fun.

And when we talk about language, we also mean computer languages. If that's your thing, definitely learn a new programming language because gone are the days when knowing just one language really well would be enough to be a good programmer. There are tonnes of resources available online, like free courses from platforms like Udacity, free web tutorials from the likes of W3Schools and more.

I will definitely try one new piece of tech

We often end up looking at the latest piece of tech and sighing, "I wish I could get my hands on these". That's the thing - you can! In today's world, no piece of technology is truly inaccessible - be it AR, VR, drones or anything else. All you need to do is go out and get your hands dirty. There are tons of exhibitions and makerspaces that have sprung up all over the country, which let you play around with these things. On top of that, experiences like VR and AR are becoming more accessible every day – both in terms of price and usability.

And if nothing else works then take the DIY route - use Digit's workshops and FastTracks and tonnes of other online sources that can get you going. You can order your materials from an online store – there are dedicated stores for almost every niche tech enthusiast market. Who knows, you might actually end up building something that completely revolutionises the field!

I will not pirate

This one is non-negotiable. You don't deserve to call yourself a gamer or a fan if you actually pirate someone's work off the internet. There are literally teams of people who've worked hard over months, sometimes years to make the thing that is now sitting on your computer for free. The least we could do is pay them what they deserve.

For games, if you cannot afford them at the moment they are launched you won't lose out on a lot. In fact, you will get to know if it's good or bad by the time you can buy it. And if you really want it all - save up. Our best bet

is the Steam summer sale every year. For movies, services like Amazon Prime have made things really accessible, and now there's literally no excuse for you to pirate your favorite movies or TV shows for that matter. C'mon, show your support and get an actual online streaming account on the website of your choice.

Everything from books to music now has dedicated online platforms that not only make things easier to get, but also cheaper. If you are a true geek you will understand how another geek would feel to see something they've worked on for months being shamelessly stolen right in front of their eyes.

I will educate

Yes, there are noobs in this world. There are people around all of us who are not tech savvy, or even tech friendly to begin with. That doesn't give you the right to make fun of them and ridicule their inability. Always remember that there was a time when you didn't know half of the tech things that you do now. As a geek, it is your responsibility to teach and educate others around you about the merits, and even the demerits, of technology.

Teach someone how to experience VR through their smartphone, share some learning resources with someone, show someone how to use a mobile wallet - trust us, these things will feel great when you see that person effortlessly doing the things you've just taught them. Not to sound cheesy, but you WILL be making the world a better place for technology.
