> TEMPTATION

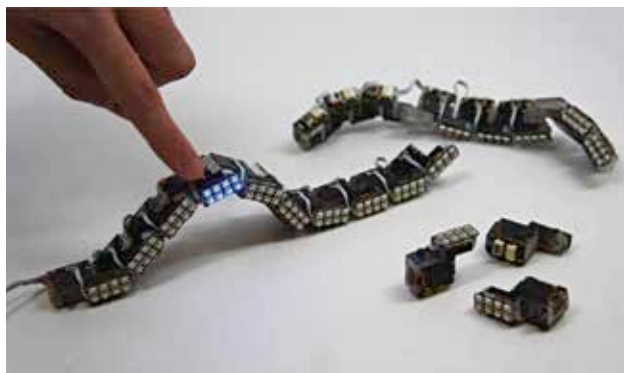

If you're wondering what to do with yourself or how to spend some time getting cultured, this section is for you...

THIS MONTH: Movie: Rogue One - A Star Wars Story, Arrival and upcoming movies to watch out for in January 2017 ...

DESIRE > SHOWCASE

ChainFORM

ChainFORM is an MIT project which is a neat little hardware system that has shape changing capabilities. It is a modular robot which, thanks to its form changing factor, can change into anything, yes ANYTHING, depending on how you put its modules together. This means you can turn into a walking robot, a clock, a joystick, the list goes on forever. With ChainFORM, you can adjust its shape, color, and even its length. Each module of ChainFORM has touch detection across multiple surfaces and also comes with blinking lights and motor actuation. The lights can also be programmed and customized to suit your needs, such as for interactive displays. ChainFORM is able

to tell how many modules are connected together and each module is capable of changing their individual function. The ChainFORM is based on a similar project from the past called LineFORM which some might be familiar with. The project is still a work in progress for the time being, but expect to see this handy gadget in markets within a decade or

so from now.

If you have a hard time picturing it, then imagine a bunch of LEGO bricks that are touch sensitive, have their own lights, are programmable and can move around on their own. With limitless application scenarios, we can't wait to see how this project evolves and we certainly hope these evolve into nanobots!

Hy

Hy is a pair of hidden wireless earbuds that are quite discreet looking can augment your natural hearing. Hy is designed to be as unintrusive as possible and is built so that you can go about your daily activities without worry. It comes with active noise cancellation and leaves your natural hearing unaffected. Another nifty feature is that it also comes with biometric sensors for the health conscious. Moreover, the which allow for health monitoring. And yes, they will release the SDK!

Bose Headphones

The Headphones allow you to control the sound

around you, allowing you to tune out distractions in noisy environments, thus enhancing your conversations and focus.

Helios

Helios is a modular touch screen wall light which

needs only a touch to turn on or off. Thanks to its modular design you can choose how much lighting you need in an area.

Hudify

Hudify turns your smartphone into a portable

and transparent heads-up display for your car and gives you features like GPS and speed limit notifications and more.

Naked Case

Naked Case as the name implies is a case for your

iPhone but one you will barely notice. The Naked Case is puncture-proof so you don't have to worry about getting scratches.
