

Switch Bot

The Switch Bot is a tiny robot which mechanically controls all kinds of switches and buttons no matter where you are. Basically, with the Switch Bot you can control your switches wirelessly. The device functions by actuating a mechanical arm which presses down. To install the Switch Bot you simply have to affix the Switch Bot right where the actuating arm can trigger the switch. It's has a 3M adhesive pad which is destined to last for ages. It is built in a way which allows it to work with just about any kind of switch found all over the world, so you don't have to worry about it not fitting your switch.

All you need to do is place it such that the arm can trigger your switch. For electrical switches around the house you might have to swap them out for spring-loaded rocker switches. The Switch Bot works well with smart home apps and devices as well and can be controlled by the likes of Amazon Echo, SmartThings, WeMo sensors and several others. The Switch Bot comes with a long battery life as well;

it's powered by a lithium battery which can be replaced but should suffice for around 600 days. After all, once the arm is stationary, it will no longer consume any power. All you need to do to get the Switch Bot running after you've attached it to whatever switch you want, simply use the free

app or whatever smart home device you have in your home. The project is now on Kickstarter and you can get one Switch Bot if you pledge \$19. Unfortunately, that rewards rung ran out way quickly, so if you want to get your hands on one, you'll have to shell out \$79.

Acton Blink

The Acton Blink electric skateboards come with a host of neat features and are made with top-grade materials to ensure you get the best ride. The Acton Blink has 3 models for you to choose from, the Blink Qu4tro which comes with 4 wheel drive and actually allows you to climb hills thanks to

its power. The Blink S2 comes with 2 wheel drive, it's meant to be an all-rounder and a cruiser with long range and allows for uphill boarding as well. The Blink S is the most economical variant and comes with 1 wheel drive. It's also the lightest of the lot and the most portable as well, making it ideal

for campuses. All 3 models come with a hub motor, a remote control and a smart app. They can be connected to your smartphone via Bluetooth and they're all water resistant. Each of the three models also comes with regenerative braking and integrated lights on the front, rear, and sides.
