

Silent Partner

Silent Partner is a SmartMask one would use while sleeping that helps deal with snoring. How this works is the Silent Partner creates a silent zone around the person in question, thereby doing away with the snoring sound for those in the vicinity. It does so by using Active Noise Cancellation technology. The Silent Partner emits a counter sound to cancel out the sound of snoring, or in more technical terms, the Silent Partner senses the frequency of the snores and broadcasts a sound wave in an inverted phase. When the two waves line up they cancel each other out. Thanks to "subwavelength active noise cancellation" the Silent Partner can reduce noise effectively from as close as 8-inches away. There's nothing to it as well, all you need to do is wear it, turn it on, and go to sleep as usual. The Silent Partner is light and compact as well, so you can carry it around with ease, and you don't have to worry about getting it dirty since it's washable. You can find the SmartMask on indiegogo.

Temperfect Mug

The very first thing one often looks forward to in the morning is their cup of coffee. And if that cup of coffee isn't just right, it could ruin the rest of the day for them. Trust us, we know this from experience. This is where the Temperfect Mug comes in, it works to ensure that your coffee stays "just right." You don't need any batteries or cords or apps to get this mug to work, you just pour your coffee in there and it does its magic, ensuring that your coffee stays just right for hours. It does this by extracting the extra heat from your coffee right as you start pouring it into the mug, this stored heat then works to keep your coffee at the right temperature. Since it extracts the heat right away, you can drink your coffee right away without worrying about burning your mouth. To pull this off, Temperfect added a second layer of insulation to a vacuum-insulated travel mug. This enables it to be able to absorb the heat and release it again slowly to keep your coffee from getting cold. Look for Temperfect on indiegogo if you want to get your own perfect mug of just right coffee.

HelloEar Arc

The Hello Ear Arc is a pair of custom earphones designed to achieve maximum comfort during use. They're built to ensure a comfortable and secure fit, no matter how long you end up wearing them. The Arc features a custom airbag structure which is flexible and bends depending on how you move. It's crafted with silica gel so that your ears don't feel too stuffy and gives them room to breathe. The design also offers a secure fit, so you can go about your workout or you jog or whatever activity you were doing without worrying about the Arc falling out of your ears. It makes use of the Z-lock earphone design, which is inspired by the Z shape sound wave reflection structure. The Arc is customisable as well, you can use it via Bluetooth or a 3.5 mm jack or even via lightning cable. Interested in the Arc? Find the HelloEar Arc on Kickstarter.

Findster Duo

Every pet lover is concerned about their pet, and it can be quite worrying when your pet is lost. It comes as no surprise that people often invest in GPS trackers for their pets to ensure that they know where they are at all times, but these GPS tracking services often require a monthly fee. This is where the Findster Duo comes in, this handy GPS tracker requires no monthly fees and has no coverage limits either. It also monitors your pet's health for you, and even rewards you for keeping your pet in good shape. In addition to precise real-time GPS tracking, the Findster Duo app includes a built-in radar as well which shows you how far you are from your pet and guides you towards them. You can set up zones on the app, the Security Zone where you want your pet to stay, and the Danger Zone, which you want your pet to avoid. If your pet does happen to wander into the Danger Zone, the app immediately notifies you. Definitely a must have for pet lovers around the world.
