

The Undersea Aquahoverer

When it comes to personal submarines, there are quite a few designs out there to choose from, but the more recent design introduced by Hammacher Schlemmer is proving to be far more versatile in comparison to its competition. The Undersea Aquahoverer is a submersible vehicle that allows for easy driving under water thanks to a hovering mechanism it uses to keep it in place. This unique vehicle has been designed in such a way that it'll automatically hover in water when it's not being driven. This means it doesn't need any additional instruments or weights to balance it underwater.

The Undersea Aquahoverer can accommodate two passengers at a time and comes with six 400RPM, 1.2-kilowatt ducted propellers and a rechargeable 15kWH battery. The Aquahoverer is easy to drive in any direction and you can park it anywhere – near reefs, or wrecks, or whatever it is you

want to look at underwater, which is precisely why this is the ideal personal submarine for enthusiasts of the aquatic kind; that is, if you're willing to dish out the \$15 million needed to get one of these.

However, if you do decide to get one of these, here are a few things you could do immediately - find Nemo, solve the Bermuda triangle, and locate Atlantis.

Ixoost Esavox

We realise that the name does indeed sound like a spell one would read in a Harry Potter book but the Ixoost Esavox is actually a speaker system. A speaker system inspired by Lamborghini and their flagship 'Aventador'. A lot of us would love to own a Lamborghini of our own, but not all of us can dish out the

\$200,000 needed to actually buy one, so instead, you can have an Ixoost Esavox parked in your garage. These speakers are crafted from a carbon monocoque chassis and houses two 8-inch carbon woofers on either side. It's also got dual 1 inch tweeters on the exhaust pipes and a mammoth 15-inch neodymium subwoofer in

the centre which in itself outs 200 watts bringing the total output to 800 watts. You can connect to the speakers via Bluetooth and it's got an RCA input as well. Just like its inspiration, the Ixoost Esavox is designed to turn heads, and sure, you could get a lot more for its \$21,000 price tag, but it's a Lamborghini.
