

MAINGEAR Rush 1ofONE

The Maingear Rush 1ofONE is a custom gaming PC born of a collaboration between gaming PC maker Maingear and the soda behemoth Coca-Cola. This custom gaming PC is a sight to behold and has an actual glass coke bottle used in its design. However, the liquid inside the bottle is not Coca-Cola, don't worry. It is in fact, Maingear's hand crafted Crystal Hardline liquid cooling. As for specs, this baby packs quite the

punch and is fitted with an Intel i7-6950X 10-Core CPU, two Nvidia GTX 1080s, HyperX Fury 16GB DDR4-2666 RAM, Samsung 950 Pro 512GB M.2 NVMe and an EVGA X99 Micro 2. Maingear have stated that the Coca-Cola PC is one of many more to come in the 1ofONE series, and we're excited to see the rest.

AB-100 Spectre

What makes the AB-100 Spectre special among yachts? Well for one thing, it's powered by three 1900hp engines which give it a cruise speed of 45 knots and a top speed of a whopping 54 knots. For a 100 foot long boat, that's very impressive. Every bit of this yacht is beautifully designed, with a top-grade galley to a living area with a massive flat screen TV. The main deck has large lateral windows flooding the place with natural lighting and then, of course, there's a winding staircase to the top deck where you can relax and take in the sights. There also 3 fully sized bedrooms too, so you have room for guests as well. Nice.

The AB-100 Spectre does something that most yachts strive to achieve, bring both speed and style together. While the price for this incredible yacht is yet to be announced, you can be sure that you're going to need a rather sizeable budget to be able to acquire this beauty.

APP WATCH

Reos Camera

Smartphone camera apps are aplenty on the app stores, with a lot of me-toos and some with their own unique features. Reos Camera's complete feature set make it feel like a Swiss Army Knife of Camera apps. The app has dynamic filters and adjustments in both the photo and video modes, which let you preview the content before clicking it. Also, there is a Prisma-like Artify mode, where, just like Prisma, you can apply artistic effects on your image. But the best part is the Search mode. Here, when you click an image of an object, the app first recognises the object and then shows you links to similar objects being sold online. It worked every single time we tried it!

Adobe Photoshop Fix

Adobe has a host of apps available for smartphones, and one of the most useful ones is Photoshop Fix. Bringing some of the most useful Photoshop features to your smartphone, the app truly lets you play around with the image. And one of the most unique features on the app is the Face editing mode under the Liquify feature set. It identifies your facial features and gives useful sliders to alter them - like making you smile more. If only it was that easy in real life!

Recipe Book

One of the top apps of 2016 according to the Google Play Store, Recipe Book goes on to show that sometimes simplicity is the best possible design principle. With useful suggestions on the homepage and inspiring blogs on the Get Inspired section, even an aspiring cook will soon get something going (or burning) with this one. Interesting features? Shake'n'Make lets you choose 2 or more ingredients then shake the phone to see suggested recipes, while Snap'n'cook lets you snap the ingredients and then suggests recipes based on what's identified.
