

library and consequently, to your Last.fm account.

Web

Even when you're generally browsing the web and listening to music on Youtube, Soundcloud or other websites, you can scrobble them to your Last.fm account if you have the Last fm Scrobbler extension installed.

Once the extension is installed, Click on the notification to open the login page on Last.fm and then allow the service access to your profile. You're all set!

Android and iOS

- Install the Last.fm app
- Login with your account credentials
- Go to Settings and enable Scrobbling for all apps in the list including 'Other music apps'

Apart from these, Last.fm's API can scrobble from a lot of services. Feel free to try them out on your own.

Supercharge Spotify with Last.fm

Last.fm's scrobbling service leaves nothing to complain about while Spotify's recommendation service could use some help. Fortunately, if you're using Spotify there's a neat tool to help you - Spotibot. Spotibot offers a range of Last.fm related services to make Last.fm work better with your Spotify account. For example -

- Use the headline feature to enter the name of any artist and generate a related playlist.
- Enter your Last.fm username to generate a playlist based on your listening history.
- Once you have a playlist, drag an on screen icon onto Spotify to play it.

- Receive recommended Spotify songs via twitter.
- Transfer Last.fm's loved tracks to Spotify playlist.

Use Last.fm extra stats to visualise your music taste

Using Last.fm data to visualise your music taste is a common use of Last.fm's API. There's an easy to use tool known as Extra stats that lets you do that on Windows.

The taste for music!

Simply download the app from <http://dgit.in/ExtrStts> and get going! If you're on Linux or Mac you can request your graphs on the same page. Another service that does this in an even more detailed way is My Music Habits.

Get Wallpaper and Screensavers by using Last.fm data

There are numerous uses to which Last.fm data can be put but this has to be one of the most interesting. What if you could use your music tastes to generate wallpapers and screensaver for your Windows PC? Turns out you can. Use Gijsc's Desktop Generator for the wallpaper and Music Quilt Screensaver for, well, the screensaver, by just entering your Last.fm username. These two services are Windows only, although there are more you can find online.

And all the cool things

Last.fm is much more than a mere song tracking and recommendation engine. Head over to <http://dgit.in/BldLstFm> and you will category-wise implementations of different extensions of the Last.fm API. There are standalone desktop radio players, plugins for blogs and social networks, and more options for showing off your listening trends using all kinds of crazy charts. There's the Last.fm Firefox Extension, which is similar to PandoraFM in that it submits your Pandora tracks to Last.fm; LastGraph, a wave generator for your Last.fm songs; Last.fm Reverse Neighbours, a tool that finds users that have you listed as their neighbor (which is Last.fm's method to let you follow users on its platform); Last.fm Desktop Generator, which generates a cool desktop for you based on your Last.fm playlists, and the official Last.fm widgets, which basically allow you to embed your playlist on your site or blog.

Trakt.tv for movies and TV shows

Just like Last.fm can scrobble your music, Trakt.tv can scrobble your tv shows and movies. And just like Last.fm, Trakt itself does not stream content but mainly shows you where you can find content. And a lot more. Read on to find out all that you can do with it.

Build your watched history

The easiest way to do this is scrobbling from your media centre. Trakt officially supports Kodi, Plex, Netflix and more. And most of the plugins from these services analyse the watched history

of the media centre as well, and sync everything back to your account. This comes very handy if you've been always using a media centre for your media consumption.

When you're not watching something online, you can still do a check-in via the trakt.tv website or the mobile app. These are referred to as manual scrobbles. Apart from this you can also manually click the purple check marks on all trakt platforms - website and app - for any movie or TV show that you have seen.

See Stats

Based on your history, Trakt shows you some useful stats on its own. On the platform, there are buttons which will dynamically update to give you stats and progress info. When viewing an episode or movie summary page, you'll see the play count and the most recent date and time you watched the item. The view all link displays a full history of every time you watched the episode or movie. Shows and seasons provide progress info including the percentage watched, episodes watched, and episodes remaining. The view plays link displays a full history of every time you watched the show or season.

Use Trakt through apps

Trakt works on a number of third party apps as well to offer you a host of features. When you go to a theater to watch a movie, fire up Movist and check in to what you're watching. The app also syncs up plays from all your other connected devices. If you're watching TV shows, use SeriesGuide or iShows 2 to easily track where you're at. There are apps for all the major platforms available,
