

Trakt has the coolest 404 error page ever

so try a few to find what you like best. Thanks to the community support you won't fall short of choices on the implementations.

Get trakt on Kodi

This is how you can download and install the trakt plugin on Kodi.

- Open Kodi (please make sure you're on the latest version)
- Select SYSTEM>Add-ons>Select Search> type in trakt>press enter or click Done
- Select Script — Trakt>Select Install
- Wait for the Add-on enabled message in the bottom right corner of your screen.

After installing the plugin, it should popup with instructions on how to connect your Trakt.tv account. If you don't see this, then follow these steps:

- choose Configure in the Trakt.tv add-on information screen, then choose How do I authorize.
- An 8 digit code will be displayed.
- Go to <https://trakt.tv/activate> on your laptop, desktop, or mobile device. If you're already signed into the Trakt.tv website, you'll see the screen below asking for the code displayed in Kodi.
- Click YES to allow Trakt for Kodi to access your Trakt.tv account.
- Return to Kodi after you see the success message.

Configure the Kodi plugin

After connecting your Trakt.tv account, Kodi will refresh and display the plugin configuration screen.

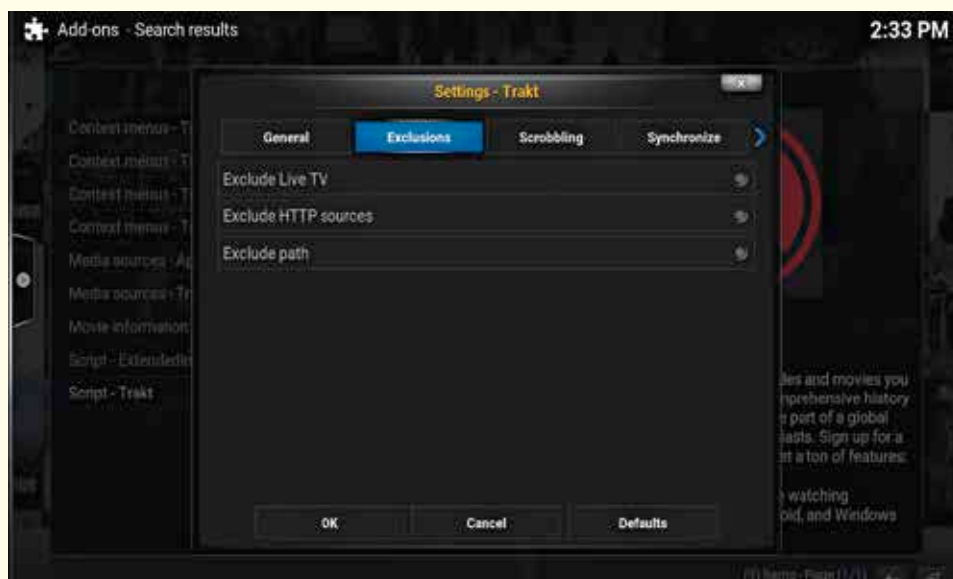

General

Notice in the top User line, it displays your connected username on the right side. If you want to re-connect to another Trakt.tv account, go through the connection steps again.

Exclusions

If you'd like to ignore items from being scrobbed to Trakt.tv, you can do that in this tab. Excluding HTTP sources means any streaming content will be ignore. Exclude specific paths if you'd like ignore local media from being scrobbed. For example, ignore any shows your kids are watching so they don't scrobble to your Trakt.tv account.

These are the most popular services that you'll need to track. Both of them are highly community driven, so anything that we might have missed out, you'll definitely find it online, along with documentation. In fact, you could even build your own implementation! If you do, let us know at editor@digit.in

Use the exclusions to avoid unwanted shows and movies being scrobbed
