

UNDERSTANDING QUANTUM GRAVITY

The effort to unify quantum mechanics and general relativity means

reconciling totally different notions of time. Understanding this research could very well unearth the true nature of time.

TRACKING HACKED ACCOUNTS

LeakedSource is a service that sends email notifications about

new breaches and offers a database of information stolen in hacks. This is how they keep track of over 3 billion hacked accounts in their database.

SPIDERMAN'S WEB WINGS

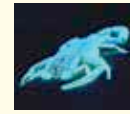

If you have seen the new Spider-Man's movie trailer,

you must have surely noticed his new wingsuit. Here is a simple explanation on how the new wingsuit can help Spider-Man glide across choppers and buildings:

UV LIGHTS FROM PHONE

What is a blacklight and how do you make one?

This is about understanding the important aspects of frequency and electromagnetic waves. You can make an ultraviolet light using just the LED flash light from your phone. Cool, isn't it?

<http://dgit.in/blacklightDIY>

However, the Band 2 is still available for purchase on Amazon, but buying it right now would be a mistake considering the company itself is washing its hands off it.

Point and Shoot cameras

2016 has truly been the year when point and shoot cameras became completely obsolete. With smartphone photography now rivalling DSLRs, point and shoot cameras vanished from retail shelves. Because who needs a bulky camera when one can just flash around the latest smartphone?

Vine

The death of Vine, a popular video-loop service owned by Twitter, came as a complete surprise to the tech world. Everyone knew the platform was struggling, but to pull the plug entirely was probably Twitter trying to tie up some loose ends before finalising its own acquisition. However, rumour now has it that Twitter might after all be looking to sell Vine at a cheap price tag.

Google Project Ara

Google's Project Ara died an early death even before its modular phone saw the day of light. According to a report by

Reuters, the company pulled funding from the project in September this year. Word is that the project was suspended in order to streamline Google's hardware efforts. Interestingly, Google had earlier promised a developer edition of the product in autumn 2016, and even announced a bunch of partners. In fact, Google even showed the products to some international media outlets.

Picasa

Google retired Picasa and moved on to a single photo service called Google Photos in February 2016. The new photos app was integrated seamlessly across mobile and the web. Although, you can access your Picasa Web Albums data, including your tags, captions, and comments, in the Album Archive.

MacBook Air 11-inch

Following the launch of the MacBook Pro with the OLED Touch Bar, Apple announced that it will be discontinuing the 11-inch MacBook Air. In fact, Apple made it very clear that it will focus on the MacBook and MacBook Pro lineups going forward. However, the MacBook Air 13 inch model, which saw a refresh in 2015, is still being sold by the company.

Apple AirPort WiFi Routers

As per a report by Bloomberg, Apple is getting out of the router business and doing away with the router division in the company internally. This means Cupertino will no longer be making the AirPort Express, AirPort Extreme or Time Capsule. Apple has reallocated their staff to other hardware departments as of now.

Hyundai i10

The Hyundai i10 also saw its last in 2016. The popular hatchback will not be produced by Hyundai anymore. This is the end to i10's 9 year production cycle and even though the car might still be visible on the roads for a few more years, Hyundai will not make any new i10s.

Portable Music Players

With streaming becoming a way of life, the death knell for portable music players has been sounded. 2016 marked 15 years of the Apple iPod, but with Apple Music in the fray, the company does not seem to have any intentions of making another iPod. The future of portable music seems to be permanently tied to that of smartphones.

Cable connections

Lastly, digital set top boxes and video streaming services have finally managed to kill off local cable connections. There are a bunch of online streaming services available for audiences to keep themselves entertained. Binge watching and pay-per-view is the how we do it now as the days of struggling with a rooftop antenna or dish come to an end.
