

PS4 controllers for Steam

Valve recently added an update on Steam. It now supports PlayStation 4's DualShock controllers. <http://dgit.in/ps4cntStm>

Gotham City Sirens

Based on DC's 2009 series Gotham City Sirens, Margot Robbie's new Harley Quinn movie is officially on its way. <http://dgit.in/GthmCtySrns>

Jabra Halo Smart

Calling essentials

The Jabra Halo Smart is a Bluetooth headset with a lightweight neckband that is unobtrusive. It includes drivers, microphone and in-line controls, with volume and answer/play-pause buttons to the right and the microphone button to the left.

Call reception is exceptional via the bi-directional, noise cancelling microphone. Noise isolation is reasonably impressive, but it does pick up a fair bit of noise if someone is talking loudly right beside you.

In-call audio clarity is good, and the loud volume helps call clarity even through intermittent network. The audio balance is focused on clear mids, which further heightens clarity. However, the soft buttons

offer rigid feedback which makes the tapping somewhat difficult.

The Halo Smart retains good connectivity with source. It experiences loss of signal at about seven feet away, but since this is a calling headset for those extensively on call, this may not be a major problem. Another con is the struggle to get the right fit. Jabra does include four ear tips, but we couldn't get a comfortable fit with any of them. This also affects the already-limited passive noise isolation and degrades audio quality even further than where it could have been with a better fit.

The neckband vibration is a great addition for callers. Music playback, though, is not impressive. Distinct lack of lows make it a mediocre experience. The app does not add much to it, although, there remains scope for improvement.

With up to 16 hours of battery life, the Jabra Halo Smart is one of the more recommendable calling headsets at its price point.

Lenovo K6 Power

Comebacks are real

The Lenovo K6 Power is somewhat late to the budget party, but it is better competition than the company's earlier phones.

In terms of design or even build quality, the K6 Power looks like any other budget device. It has a metal back, the camera module and fingerprint scanner have the same central location and there are no on-screen navigation keys. There are subtle changes to the power and volume keys, and the speaker placement, but that's about it. It is equipped with a 1080p panel. We found the contrast ratios and colour saturation of the 720p panel on the Redmi 3S Prime to be better.

The Lenovo K6 Power with its Qualcomm Snap-

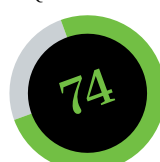

dragon 430 SoC, Adreno 505 GPU and 3 GB of RAM performs very similar to the Xiaomi Redmi 3S Prime. App load times and multitasking performance are better than last generation K-series phones. However, this one is still slower than a 16 GB Xiaomi Redmi Note 3. The audio output of the device is nice with headphones, and music lovers will like it at this price.

Lenovo claims about 13 to 14 hours of battery life from the 4,000 mAh battery, but we got about 12 hours on a single charge, which is still good. Further, the rear camera really shines. The colour reproduction is good, and it offers better details than most sub-₹10K phones.

In essence, the Lenovo K6 Power ticks all the right check boxes and with it, Lenovo has made a comeback in the budget segment.
