

Dark atomic clocks

NASA's scientists believe that old atomic clocks can help test forms of dark matter from the universe. <http://dgit.in/AtomicClick>

LG ProBeam projector

LG's new small form-factor laser projector supports Miracast, Bluetooth and a 1080p video playback. <http://dgit.in/ProBeamLG>

HIS RX 460 iCooler OC 4 GB

Polaris Mini-Me

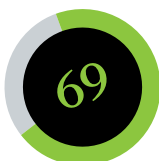

Price
₹9,645
(+ Taxes)

Based on the Polaris 11 GPU the Radeon RX 460 is a scaled down version of the RX 480 targeted at eSports and low power systems. With 896 stream processors housed within 14 compute units, the RX 460 aims to lay waste to the sub-₹10k price bracket. It boasts of a 112 GB/s memory bandwidth which is the same as the

reference GTX 960 or the Pascal based 1050 and 1050 Ti. Both cards are built to stay within the 75W thermal envelope but only the 1050 acts as a direct competitor as it too is a sub-₹10k GPU.

The HIS RX 460 iCooler OC has decent build quality, after all, with less than half the stream processors of the RX 480, you don't generate much heat. The cooling fan's noise is distracting at peak workloads but those were during synthetic benchmarks. During gaming, only the occasional ramp ups were audible. In gaming, the RX 460 is neck and neck with the GTX 1050 with certain games performing better on the RX 460 while some others doing well on the GTX 1050. Needless to say, Doom, Hitman and Total War: Warhammer run quite well on the RX 460 but games like Far Cry Primal Witcher 3 do well on the GTX 1050. For eSports, it manages to keep the minimum frame rate above 50 in CS:GO and Overwatch.

Kingston HyperX Cloud Stinger

Forget music, these are great for gaming

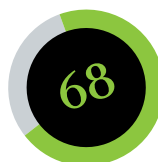

Having used the headset for a good month, we can say that these

are really comfortable for extended period of time. The HyperX Cloud Stinger opts for a circumaural, closed-back design for the ear cups. The memory foam on the cups coupled with the right amount of clamping pressure ensure a well aerated environment on the insides of the cups. We've had it on for approximately six hours at a stretch with next to zero discomfort being experienced.

The microphone of the Stinger felt quite close to the audio capture source i.e. our voices! Moreover, the swivel to mute function is handy. The active noise cancellation on the microphone was quite effective at reducing feedback while streaming clan matches where you have one too many people shouting right next to each other. In our CS:GO audio-location tests, we were able to detect spawn locations and rapid movement quite accurately, weapon sounds weren't overly bass heavy which is what you want when gaming. As for music, it doesn't make the cut. Songs like Pink Floyd's Comfortably Numb or the live rendition of 'Yanni's The Rain must fall' that feature most of the mid-range spectrum seem lacklustre. At the end of the day, these are gaming headphones and in that department, they do a pretty good job.
