OnePlus 3T

Better than the best

How do you make something that is the best-in-class better? Or rather, should you be upgrading a phone that is already good? Well, that is exactly what OnePlus is trying to do, with the OnePlus 3T. The 3T brings small hardware changes, keeping the aesthetics unchanged.

However, OnePlus says it saw room for improvement, with the new SoC, the Qualcomm Snapdragon 821, 16 MP front-facing camera and the battery capacity has been increased from 3,000 mAh to 3,400 mAh.

Display and Design: Same as last time

The OnePlus 3T looks and feels exactly like the OnePlus 3. The only difference is the new 'gun-metal grey' colour, using the same, robust metal build as its predecessor. The AMOLED display used on the phone is still one of the best around in terms of colour reproduction.

Performance: A slight increase

Equipped with the Qualcomm Snapdragon 821 SoC, the OnePlus 3T is slightly faster than its predecessor. However, this difference is difficult to spot on day-to-day usage. You can literally open 30 apps (we had more than 50 apps installed on our test unit) and each one of those apps will keep running in the background.

Gaming experience on the phone is also similar to that on the OnePlus 3, or any flagship other Android phones. It's smooth, and does not falter even if you play multiple games back-to-back, or games like Asphalt 8 for long periods.

The difference is noticeable only on synthetic benchmarks. The OnePlus 3T is undoubtedly faster, but not by a large margin.

Battery: Marginal increase

The slight bump in performance is complimented by a 3400 mAh battery, which supports Dash Charging. The 3T can easily withstand a work day's worth of moderate usage. However heavy users may have to charge the phone twice per day.

Price
₹29,999

This, though, is no different from the OnePlus 3, which begs the question as to why the OnePlus 3T is needed. The new battery doesn't really add to the battery life, despite the extra 400 mAh boost to capacity.

Camera: Selfies galore

The front facing camera is where the main change is. It has been upgraded to a 16 MP sensor. With it, the image quality of selfies have also improved. Photos come out sharper than the OnePlus 3, while details and colour reproduction are also better. It is amongst the best front facing cameras we've tested in a while.

On the back, the OnePlus 3T uses the same 16 MP Sony sensor used in the OnePlus 3. It is PDAF (Phase detection auto-focus) enabled and is aided by OIS (optical image stabilisation).

However, it seems there are mild algorithmic changes in the camera app, with Oxygen OS version 3.5.3. Images look more vibrant in normal lighting conditions, and sharpness and contrast are slightly better. Low-light images look pretty much the same as on the OnePlus 3.

Bottomline

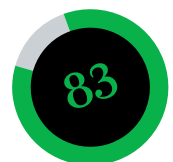

Jargon aside, the OnePlus 3T is really not a big upgrade to the OnePlus 3. The processor is indeed faster, but 10% is not noticeable in real world performance. If you have the OnePlus 3, you're not missing out on much.

The 128 GB variant may seem more expensive, but paying 5k more for the extra storage seems to make much more sense than what Google and Apple ask for. The OnePlus 3T still makes sense, compared to the flagship phones.

Verdict

If you have a OnePlus 3, the OnePlus 3T is not a big upgrade. If your budget is around 30-35k, the OnePlus 3T is indeed the best smartphone to buy. It is the most value for money smartphone in the market today.
