

Brain scanning babies

New research finds out that brain scanning in high-risk babies during their first year can predict signs of autism. <http://dgit.in/BabyScan>

Music with AI Duet

The latest AI experiment from Google 'Duet' is a music playing robot that can replicate piano keys. Learn more: <http://dgit.in/DuetAI>

mend the Acer Chromebook 14. Although it's expensive, it comes with a full HD screen and a strong processor, so you will be able to use it as your entertainment and work laptop. If you're tight on budget, then you could go for the Acer Chromebook 11. If you want more storage, you can go for the ASUS C301 that gives you 64GB of internal storage apart from the regular 32GB of storage.

Q A laptop that can run games comfortably

Hey, please suggest me a laptop under 50K which can run CS:GO between 60-100 fps in low settings. P.S. I hate Dell.

—Adarsh Bagaria

A Hey Adarsh, under ₹50,000, you might not get a good enough gaming laptop. If the sole purpose of your laptop is to play games, then we would suggest you to push your budget to

something around 70k. This will let you play triple A titles in low to medium settings. If your budget doesn't allow you to cross 50k, then you could go for the Acer Aspire E5-574G. You get a 6th Gen Intel Core-i5 processor along with a discrete NVIDIA GeForce 920M graphics card. You'll also get a full HD 1920x1080 display and 4GB of RAM with 1TB of HDD storage. This laptop will let you run CS: GO easily at a minimum of 60 fps in medium settings.

Q Finding the right lens for the right purpose

Hello Team Digit! I'm using a Nikon D3300 with the kit lens AF-S 18-55 mm. I wish to upgrade the lens with new AF-P 70-300 mm. Is this worth to buy? Kindly Help!

—Deven Jain

A Hey Deven, buying lenses apart from your primary ones should be

based on what you intend to capture. Since you're planning to buy a zoom lens, you also need to consider whether you'll be fine with a 70mm wide setting or whether you need a more wider setting. If that doesn't matter, then go ahead with the 70-300mm VR. This lens will let you take fast photos of subjects like cars or flying birds. Although, if you want a wider setting and just simple zoomed photography, then we would recommend the 55-300mm. Remember, that this lens performs poorly while zoomed into moving objects. **1**
