

> GREED

For those who just want more than should be humanly allowed, we have enough to satisfy your hunger...

THIS MONTH: Cars from the Geneva Motor Show coming to India soon, Louis Vuitton Escale Spin Blue, Fastrack Reflex, Oakter and more...

> TEMPTATION

If you're wondering what to do with yourself or how to spend some time getting cultured, this section is for you...

THIS MONTH: Iron Fist, Logan, Fate of the Furious, Persona 5, Samurai Jack S5, and upcoming stuff to watch out for in April 2017 ...

DESIRE > SHOWCASE

Smartflower POP

Handle

Boston Dynamics showcased a video of their latest robot, the Handle, early this February. This 6-foot 5-inch robot is quite the creation. CEO Marc Raibert even called it a "nightmare inducing robot." Towering over most humans at 6ft 5-inches, this robot can easily lift around 50 kgs, glide around ramps, uneven terrain and jump to up to 4 feet! With just 10 joints this robot can do more than most robots with thrice as many. If rise of the machines is something that scares you, then be afraid. Be very afraid.

Smartflower POP claims to be the world's first all-in-one solar powered system. Smartflower uses what is known as photovoltaic technology to convert solar energy into electricity. Smartflower POP is capable of delivering on an average of 4000 kWh per year, which is more than enough to fulfil the electricity consumption needs of an average household. Unlike solar panels or other rooftop units which come with the hassle of needing to be installed, Smartflower POP is easy. Simply plug it in, like any other device, and you're good to go. Smartflower POP unfolds itself automatically when the sun rises. Its fan/petals automatically track the sun throughout the day, making it far more efficient than

the stationary rooftop solar panels. Once the sun has set, Smartflower automatically closes itself up. This isn't called a "smart"flower for nothing. It comes with a host of smart features along with it to maximise efficiency. Thanks to smart tracking, the Smartflower is able to track and follow the sun for

the course of the entire day. Its "smart cleaning" feature automatically cleans itself of dust and/or snow deposits every time it folds and unfolds. Other smart features include smart cooling, smart safety and smart mobility. The Smartflower is definitely the right step to take toward the direction of clean energy.

Caavo

Caavo's goal is to unify all your devices and services

and make them all easily accessible and controllable via one single remote. Do away with hassle and access everything on one device.

uArm Swift

The uArm Swift is an open source robotic arm

which is capable of a host of tasks from picking and placing things, laser engraving, writing, painting and more.

Braeon

The folks who made this call it the "world's strongest and

most adaptable" material. Braeon is a lightweight plastic ribbon that molecularly fuses to itself in a matter of seconds.

Pixelvar

Pixelvar is an app controlled handheld LED wand. Just

wave it to see your image in mid air. Pixelvar works based on a human visual system called Persistence of Vision, or POV for short.
