

DESIRE

TAKE MY MONEY!

Here is where we keep an eye on crowdfunded projects that will make you go 'Shut up and take my money!'

Pebby

Pebby is robotic pet sitter that helps you track, monitor and even play with your pet remotely. Considering how important pets are it comes as no surprise that we don't want to make any compromises when it comes to their well-being. Especially if we have to leave them alone at home alone for long hours. This is where Pebby comes in. Pebby is a smart collar and ball system, which lets you monitor your pet through your mobile phone. You can even capture images and videos with the Pebby's wide-angle fisheye lens. Other features include a bark/nudge notification, activity tracker, auto-play and auto-follow features, night view and more. You can find this robotic pet sitter on Kickstarter.

MonsterBorg

MonsterBorg is, in the words of PiBorg, "The Ultimate Pi Robot." This little monster truck has an aluminium chassis, off-road wheels, fast motors, a self-driving code and a powerful motor controller. They call the controller the ThunderBorg. The ThunderBorg and MonsterBorg have both been built to suit any skill level. You can control the MonsterBorg via game controllers or joysticks, like you would for any remote controlled car. Or you could control the Borg via a web-based browser. You can even let the Borg drive itself using a self-driving code. There's a lot you can do here. The robot comes with access to several examples of code for you to experiment and mess around with, from self-driving, to robot racing if you plan on getting more than one of these. Other than that, the MonsterBorg has up to three hours of runtime, 4-inch off-road wheels, 4x 300 RPM Zhengke 37mm motors, and is designed for the Raspberry Pi 3, Pi 2, B+ or P Zero. You can find MonsterBorg on Kickstarter.

PLEN Cube

PLEN Cube is a personal, customizable, palm-sized assistant robot. Its size means that you can take it with you wherever you go; your very own portable personal assistant if you will. This tiny cube is capable of a lot of things. It can take panoramic pictures and is capable of face detection. It can set notifications and reminders for you. You can share your photos and videos through the PLEN Cube, and listen to music. It's even got an action camera. This 3-inch cube packs a lot of hardware. You've got a Full-HD camera, a display, a microphone array and speakers. It's WiFi and Bluetooth enabled for instant sharing to social media. Of course, there's an accompanying app as well which helps you connect the PLEN Cube to the web services. PLEN Cube can notify you through its display, movements, sounds, or even send notifications directly through your mobile if you so prefer. Interested? Look for PLEN Cube on Kickstarter.
