

## Titan Note

Now this is something anyone attending lengthy classes or lectures will definitely want to have. How the Titan Note works is simple. Just place it on your desk or table during class or a lecture, and the Titan Note will not only record the entire thing, but accurately convert the whole thing to text and even summarise the whole thing for you! This effectively makes the whole note making process a lot easier, and of course, your life

as well. The Titan Note is capable of taking notes, distinguishing who's speaking, summarising your notes for you, translation, note sharing, editing, organising and more. It's small and compact so it's easy to carry around. You can access your notes via

an app that's available on both iOS and Android as well. But that's not all, with the Titan Note you can also listen to music, and even charge your mobile devices via its USB port. We're definitely interested in picking one of these up. If you are too, look for the Titan Note on Indiegogo.

## Tesla's Insight

Tesla's Insight is a top, which is capable of generating electricity by spinning. It's a tiny top for you to fiddle around with on your desk. The Insight is capable of producing between 1V to 6V of AC output. Output depends on how fast the top is spinning and the orientation of its arch. The spinning magnet is what generates the power. It was Tesla who realised over a 100 years ago that a spinning magnet would generate Alternating Current (AC) in nearby coils. It's the same principle with the Insight. You don't have to worry about getting a shock, 6V isn't shocking anyone. However, 6V is enough to power some electronics, like LEDs for example. How long it's powered depends on how long you can get the top to spin. So as you get better at your spin technique, stuff will stay powered longer. Might be too much of a distraction at work though. Look for Tesla's Insight on Indiegogo if you want one yourself!

## Smart Sleeper Travel Pillow

The Smart Sleeper is a travel pillow for those who can't sleep during transit due to uncomfortable seats, lack of neck support, etc. It's one of the reasons we dread

long journeys, i.e. travelling by train or bus. The Smart Sleeper Travel Pillow comes with a built-in hoodie and sleep-mask. There's pockets on the side for you to slide your phone into. Ideal for those who like listening to music while travelling. The removable cover of the travel pillow is machine washable so you don't have to worry about it getting dirty over time. The base, or the "meat" of the travel pillow, is made out of memory foam. It's everything that you would want from a travel pillow. From the basics, to extra convenience, the Smart Sleeper has got it. You can back the Smart Sleeper on Indiegogo.

## Makeblock Neuron

Makeblock Neuron is an electronic building block platform that utilizes easy-to-use tools for STEM education. STEM education focuses on Science, Technology, Engineering and Mathematics. Makeblock's goal is to make this easy and fun with its programmable building blocks. It consists of over 30 types of blocks, each with a different function, which creators can put together however they want, to perform whatever function they want. This is great for not just beginners, but creators of any level to utilize. Neuron's blocks are software independent so they can work with or without an accompanying software. However, paired with the Neuron App, the blocks can perform much more complicated functions. Neuron blocks are compatible with Lego bricks as well, via the Neuron board. Neuron's protocol and library are open-source and can be found on GitHub. If Neuron interests you, it's on Kickstarter.
