

GREED

DROOL MAAL

Get your drool on and behold some of the fanciest, ostentatious and drop dead gorgeous things money can buy. Droolworthy?

Louis Vuitton Escale Spin Blue

Louis Vuitton's Escale Spin Time watches are powered by a newly developed, in-house, automated movement. Each of the Escale Spin watches feature 12 rotating cubes, which tell the time. The 2017 Escale Spin Time Blue however, also features a flying tourbillon in the centre of the dial. The flying tourbillon V-shaped carriage floats over the dial and Louis Vuitton have enhanced this effect by using a specially designed sapphire crystal. Time is indicated by one of the 12 cubes, each representing an hour.

While the cube that represents the current hour is white-faced with the hour's numeral on it, the faces of the rest are blue and decorated with nautical flag motifs. The Escale Spin Time Blue is accompanied by a navy blue alligator strap with calfskin lining and a white gold pin buckle. The watch case is 41mm in diameter. The case bezel, lugs and crown are made out of platinum while the middle is made out of titanium. The Louis Vuitton Escale Spin Blue will cost you \$123,000 or \$182,000.

APP WATCH

AmpMe

Sometimes, to throw a party, all you need are a bunch of friends with smartphones. Oh, and also the AmpMe app. The idea behind AmpMe is pretty simple - synchronized music playback on multiple smartphones - something many of us have tried to do so far purely relying on the sync skills of our friends. But if you've got AmpMe, you can bid goodbye to that trigger finger and let the app

do all the hard work. All participants need to open the app and one of them needs to host a party. The app supports playback from Spotify, YouTube and SoundCloud and also your local music library.

Pocket Code

Ever wanted to create your own games but balked at the sight of programming books? Pocket Code is an app that wants to help you understand the basics of coding while making you build games in a fun and simple way. Once you start the app, you should actually go to the help section. In the help section, topics are divided into areas as well as expertise levels. For example, Game Design covers a lot of things

like Character animation, collision detection and more, with a dedicated subsection to each that contains a brief explanation, an instructional video, and the option to download the program used in the said video.

Planner 5D

Is VR merely restricted to being an entertainment platform right now? Planner 5D doesn't agree. The Android and iOS app might look like just a home planner to begin with. However, it is a pretty handy

one at that. Hit the new project button and you will see a coloured blueprint of a typical 5m x 5m room in front of you. The red plus '+' button is where most of the stuff that you can add to your house lies. You can switch the view to 3D anytime with the 3D toggle button. But the real fun begins when you hit the cardboard icon - you are thrown into the middle of a VR representation of the house you were just designing! Explore your dream house in VR if you're patient enough to design it in the first place.
