

GREED

EXAMINED

Some very cool products come to the Digit Test Centre which don't really fit into the standard product categories that we review in the Bazaar section. We write about them here mostly to make you turn green with envy.

FiiO X5 3rd gen

The FiiO X5 3rd Gen is a Hi-Res Digital Audio Player directed at Audiophiles who don't want to compromise on audio playback quality even when on the move. Sporting a 4-inch IPS full touch display, the device runs on Android 5.1 Lollipop. Interestingly, the UI for the device is simply an app called FiiO Music, which is quite user friendly. The build quality is top notch with a sturdy chassis and a PU leather cover thrown in. It features two concealed microSD card slots on one side and a solid volume knob on the other. At max supported values, the cards together up the capacity of the device to a whopping 512GB. This brings us to the most important bit about the device – what's inside. The FiiO X5 3rd Gen doesn't use just a single DAC chip, it uses two! One DAC AK4490 will decode sampling rates of 44.1/88.2/176.4/352.8 kHz while the other will be dedicated to the 48/96/192/384 kHz rates. Files sampled at

a bit depth of 32-bits are rare, but hey, props for futureproofing. The audio playback time you get from the 3400mAh battery is quite impressive but the standby time was a little troubling especially after we upgraded to the 1.1.2 firmware build. Hopefully, it's a small niggle that future software updates will solve.

SPECIFICATIONS

Dimensions/Weight: 114.2mm x 66.2mm x 14.8mm; 186g | **Display:** 3.97-Inch IPS TFT touchscreen, 480x800p | **DAC:** AKM AK4490EN | **SoC:** Cortex A9 SoC Rockchip RK3188 | **RAM:** 1GB | **Storage:** 32GB; expandable to 512GB via two microSD slots | **Battery:** 3400mAh Li-Polymer battery | **Format support:** DXD, DSD, FLAC, WMA, AAC, DTS, WAV, APE, OGG, etc | **Playback:** 3.5mm, balanced 2.5mm TRRS, 3.5mm line out, DLNA, Bluetooth (aptX)

R.E.V

Quirky and different, R.E.V. is a combination of two toys in one package. You get a toy drone and a car – one of which one you control and the other can either be controlled by another human player or you can leave it to the AI. You can even club multiple sets together and the app UI colour indicates which unit is currently being controlled. The set up is easy, all you need to do is install the app, switch on Bluetooth and you're set to begin an epic game of cops and robbers. You can run either toy solo, in which case, the car

is a lot easier than the drone. The chase begins when you move the car around and the drone initiates the chase. Both devices have weapons to fight back. The car runs on 4 AA cells and the drone

makes use of a rechargeable Li-ion battery pack. Together you can play around for about 15 whole minutes before you'll need to recharge the drone. If you haven't ever flown a drone then the two player mode will either end up being a lot more fun or ridiculously frustrating based on how good the drone driver is. So it's better you practise with the drone solo before you decide to mouth off to someone about your mad flying skills. There are a few game modes available currently with more to follow in future updates. R.E.V is sold in India by Hamleys.
