

CONTROL EVERYTHING WITH VOICE

Smart assistants have created a revolution in controlling everything with voice. From our smartphone to our living rooms, voice controlled systems are taking up everything. With the significant progress made in Machine Learning and Natural Language Processing, voice controlled applications can now understand different accents and do smart things. Taking advantage of that let's try to control everything entirely with voice commands.

Control your entire phone by voice

Google launched an application last year that lets you control your phone inside out using voice commands. Going beyond the features smart voice assistants like Google Now offer, Google Voice Access lets your control individual apps using your voice. Although it's targeted towards users having problems accessing the touch screen, it isn't a typical accessibility app.

To start with, download "Voice Access" from the

Call out for these numbers to open the respective app.

Control everything with voice..... 14

Floating Apps on Android 16

{ Tips & Tricks has its own page numbers, and does not follow the rest of the magazine's page numbers. This is done to ensure that you can cut out and save T&T in a separate folder for later reference. }

Play Store and install. Once installed, go to Settings > Accessibility > Voice Access > Turn on.

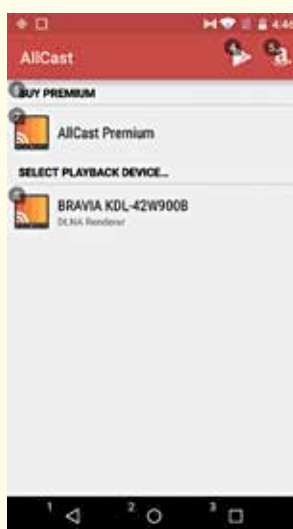

Voice Access app needs to be launched before you start controlling your phone using voice. However, launching the app needs touch intervention, thus, hindering the truly voice controlled functionality. To make everything truly hands-free, update the "Google" app on your phone. Once updated, launch it and navigate to Settings > Voice > "Ok Google" detection > and turn on "From any screen". With this done, you can call the Google Voice Assistant and ask it to start "Voice Access" app.

Play content on your TV with your voice

If you have a smart TV and an Android phone, then you can create a voice-controlled media center for free. The idea here is to cast media from your phone to your TV using voice commands. To cast content from your

phone, download and install "AllCast" app from the Play Store. Start the Google Voice Access service if not already started. Open AllCast app and call out for the photo number you want to cast. Also, you might need to call out for the device you want to cast your media on.

Using the same method but to control your TV

Automate your home using voice

Have you installed home automation gear into your house that can be controlled

using an app? If yes, you can enhance the functionality of that existing app by making it listen to your voice commands. Using the Voice Access app mentioned above you can control every part of your home automation app with voice commands. Thus, saying "turn on light" will make your phone turn on the light for you. Isn't it cool?

Enable Voice Operation on PlayStation 4

You'll need the PlayStation Camera or a standard headset that you use while gaming to use the built-in voice operation mode. If you have the required gear, enable voice operation by navigating to Settings > System > Voice Operation Settings > check "Operate PS4 with Voice". After enabling, you can access voice operation by saying "PlayStation" or hitting the "L2" button on the controller.

You can ask PS4 to 'take screenshot', 'start/stop broadcast', 'turn off PS4', '[game name]' etc.

Activate Cortana on Xbox One

You'll need an Xbox compatible microphone or Kinect to voice command the console. If you have the required gear, double tap the "Xbox logo button" on the controller or if you are using Kinect just say "Xbox, go to settings". Navigate to All Settings > System > Cortana settings > I agree > Restart now. After enabling just say "Hey Cortana!" and you'll see Cortana listening to your commands in the top-right corner of the screen.

You can ask Cortana to 'turn on Xbox', 'open game', 'volume up/down', 'search store', etc.
