

YouTube, browsing the web or even while taking a call.

Watch YouTube videos in a floating video player

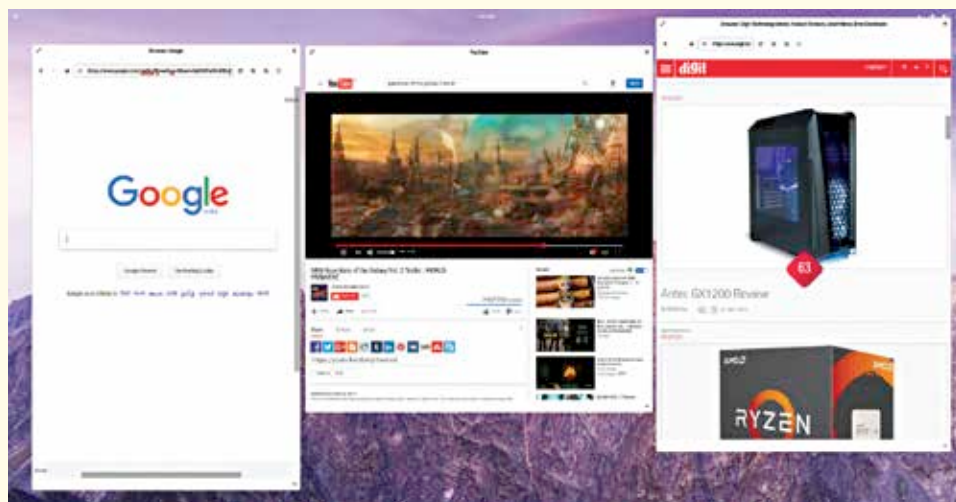

Say you want to stream YouTube while fiddling on Twitter at the same time? You can do that using 'Background Floating Tube'. Basically, it is an app that allows you to play any YouTube Videos on a floating re-size-able player that can play on top of any other application. The video player is movable and can also be minimized. The player also gives all of the controls similar to the mobile YouTube app and so you can easily share, adjust volume, video quality, enable/disable subtitles, straight from the floating screen itself.

Float your web browsing with floating tabs

Flyperlink and Flynx are basically web browsers specifically designed for multitasking on smartphones. Using these apps you can open any links or websites as bubble heads that can also be minimized. The heads float on top

Hook up your smartphone to a keyboard, mouse, external monitor and download the multi-window Leena launcher for a desktop like appearance.

of other apps so you can easily multitask. Using Flyperlink, you can have multiple links opened and switching between them is only a swipe away. Another cool feature in Flyperlink is that it supports adblock and also includes Chrome Custom Tabs.

Float specific apps and even folders

There is an 'completely free' app called 'Fast Access (Floating Toolbox)' on the Play Store using which you can create a fast access launcher/toolbox for your

Create shortcuts for your favourite apps with 'Fast Access Floating Toolbox'

apps and even specific folders. The application will detect all your installed programs and you can easily select the ones for which you want a quick launch shortcut. Once you have selected a list of applications, they should be available for fast access from the app's floating icon. The icon is translucent, movable and can be activated by a simple tap. A long tap to the icon will close it while a quick double tap will take your phone to the home screen. There is another similar app called 'FloatingToolBox-Floating App' which gives similar functionality with a slightly different look.

Get multiple floating window apps

With this application you can create multiple windows like on a computer with all running different application at the same time. The app currently has 32 individual apps that you can access and operate in smaller windows. For instance, you can have an browser, a stop watch, YouTube, calculator, and even a phone dialer all operating at the same time. The application offers a lot

of customisations and from the settings you can change the theme, font size, transparency, language, even add a launcher notification bar, enable or disable hardware acceleration, etc. 'Tiny Apps' is another similar application that might not include as many features as 'Floating Apps' but offers a more intuitive and responsive UI.

Set a multi window launcher for large screens

Leena Desktop UI (Multiwindow) is an interesting theme that gives your Android device a desktop (that'll strongly remind you of the MacOS) like appearance. The launcher comes included with its own browser, file manager, a native video player, image viewer and also a couple of web apps. The primary aim of this beta launcher is to use your smartphone to replace your desktops for all basic tasks. To get started with the whole Leena UI experience, hook up your smartphone to a keyboard, mouse, external monitor and be blown away with how much mobile operating systems have grown over the last decade.
