

up. Since he was trying out OBS on the side, he decided to use the embedded webcam in his laptop. There's nothing wrong with using that to get the hang of OBS except for the fact that his laptop was a 15-year old IBM Thinkpad with a VGA camera. Kudos to IBM for building laptops that last more than a decade but the video resolution was so bad, that for a moment it felt like the '90s and we were back to watching animated GIFs. The cringe was worse than going through a hundred dank memes. We checked out all the webcams available on Amazon and it was pretty evident that Logitech was ruling the top-selling list. We needed a webcam that could capture widescreen too since my friend planned on streaming co-op games as well with two hosts in front of the camera. Another need was for the camera to be able to capture at least 30 FPS at 1080p to avoid ghosting.

There were quite a few contenders that fit the role. The Brother NW-1000 is a decent webcam but it lacks exposure compensation and face tracking. The latter being an important feature for any webcam these days. So we moved on to the HP HD 4310. Again, this too was a decent webcam and we nearly bought it but a quick glance through the user reviews revealed that the front panel was made of plastic.

Plastic scratches very easily and a few months down the line you'll be left with a foggy lens. Next up was the Genius WideCam F100 which is pretty good for getting a wide angle but quite a few users mentioned that it was prone to stuttering, an issue that has plagued the unit for a long time. And we skipped that too. Then we checked out the Logitech C920. And boy, was it good. It has everything – 1080p at 30 FPS with the option to tweak the resolution, exposure compensation is good and there's face tracking as well. Moreover, it comes with a glass plate and has a tripod mount on the bottom. Jackpot! All that was left was to go through the user comments and it turns out the the C920 is the gold standard for webcams. So we went ahead with the C920. You might wonder, why not the C922? It records at 720p 60 FPS and has a built in green screen filter. Well, since we were using OBS, the stream was going to be at 30 FPS and OBS has built in green screen. Hence, the extra features on the C922 were redundant with our setup.

My friend hasn't begun live-streaming yet but every now and then he shares an unlisted video to show that he's closer to making good on his promise. Who knows, one day he might invite me to play co-op on his stream. Till then, ciao! 🇮🇳

🇮🇳 A GTX 1050 laptop

Hello there Digit!

When will a GTX 1050/1050 Ti laptop be released in India? Do you have any idea about the expected starting price?

– Febin S

🇮🇳 Hey Febin, gaming laptops embedded with NVIDIA GTX 1050 and 1050 Ti GPUs are already here. We've already covered six of them in a recent slideshow that you can check out here: <http://dgit.in/GTX1050LapDgt>. Most of the laptops mentioned here haven't been listed on online stores but the following can be found:

- Asus ROG GL553VD-FY103T
- Asus FX553VD-DM483

- MSI GP62 7RD
- MSI GL62 7RD
- MSI GL62M 7RD
- MSI PE60 7RD

The MSI GL62M 7RD is the most affordable GTX 1050 gaming laptop.

Element of Success

Add a little attitude to all your presentations with iBall's 2.4GHz Wireless Presenter. Probably the most powerful presentation tool an executive will ever hold!

- 2.4GHz Wireless Trackball presenter device
- 6 Button with built-in laser pointer
- USB Micro receiver
- Use as mouse with Trackball & Left click button
- Left & Right button for previous or next slide
- On/Off switch to save battery life

TRACKBALL PRESENTER
