

Betty Smart-Plug

Beyond Evolution's new smart-plug lets you control your home appliances from anywhere. <http://dgit.in/BettyPlug>

Jabra Talk 2 headset

Jabra's new handsfree bluetooth headset is now available in India for ₹2099. <http://dgit.in/JabraTalk2>

The lowest price online is for the MSI GL62M 7RD at ₹72,990.

Gaming for good

I want to build a budget PC for gaming. I'm a very big fan of Digit and my family reads your magazine. My parents decided to buy me a gaming PC so help me with it. Here's the rest of my specs that I'm planning to purchase:

- **CPU:** Intel Core-i7 6700K
- **Motherboard:** Gigabyte GA Z170X Gaming 7
- **CPU cooler:** Cooler Master Hyper 212X
- **GPU:** Gigabyte GeForce GTX 1080 G1 gaming
- **RAM:** Corsair Vengeance LPX 16GB (1x 16GB) 3000MHz
- **HDD:** WD Blue 4TB WD40EZRZ
- **SSD:** SanDisk Ultra II 480GB SATA 6 Gbps
- **Speakers:** Marvo SG-201 (USB 2.0) Blue
- **Optical drive:** ASUS DRW-24D5MT
- **Cabinet:** Cooler Master MasterCase Pro 5
- **Case fans:** 2x Cooler Master Sickle-Flow
- **Keyboard:** Logitech G910 Orion Spark
- **Mouse:** Logitech G502 Proteus Core
- **Headphone:** Logitech G633 Artemis spectrum

Do recommend me a PSU and UPS as well. They should each be under ₹10k as I've already spent the rest. Is the Acer G257HU good enough? Is WQHD good for gaming? I hope it doesn't create any problem. Can my screen handle the G502 (please consider the CPI and resolution of the screen whether its size is good for me or not). Also, I have no problem with a heavy mouse.

– Gems Duniya

A Looks like you're building a serious gaming rig. From your list of components, we would suggest these changes:

- **CPU:** Intel Core i7-7700K
- **Motherboard:** MSI Z270 Gaming M5
- **CPU Cooler:** NZXT Kraken X61 or Corsair Hydro Series H100i V2
- **SSD:** Samsung 960 EVO Series - 250GB PCIe NVMe - M.2 Internal
- **GPU:** NVIDIA GTX 1080 Ti Founder's Edition

- **Speakers:** Logitech Z506 Surround Sound 5.1
- **Cabinet:** Cooler Master MasterCase Maker 5
- **PSU:** Seasonic S12II Series 620W
- **UPS:** APC Back-UPS BRI500G-IN 1500VA
- **Monitor:** Acer XB270HU 27-inch 144Hz 4K G-Sync

The rest of it look great. The Acer G257HU is good but the Acer XB270HU is better. You won't face any CPI issues with the resolution of the screen since the CPI level is adjustable on the G502. You can go for the RGB version of the G502 named Spectrum at the same price. If you really need a UPS then go for an expensive pure sine wave UPS.

YouTube aspirations

Hey Digit life savers! I'm just a newbie to YouTube, thanks to your "Become a successful YouTuber" FastTrack edition. I've started recording videos on my Xiaomi Note 4. The videos are not stable. Hence, I'm here to ask you about buying a smartphone stabiliser. I did some research and found the flow motion one which is a bit expensive. Recommend me a less expensive one which is around 3-4k. Thanking you in advance.

– Sharan

A Hey Sharan, mobile stabilisers are more of a luxury. If you're recording still videos then you only need a tripod with

Smartphone stabilisers are expensive and not worth investing in the initial YouTuber days

a phone mount. You can go for the AmazonBasics 60-Inch Lightweight Tripod and any selfie stick that lets you attach the mount to a tripod. If you're shooting videos on the go then you can do so by getting a selfie stick that offers some amount of stability.

Friendly match

Hello Digit's Overlords, my best friend shifted to the PC Master Race, and I am planning on following him, as we both play nearly same games and share accounts to save money, I thought about changing my title from a console peasant to a PC overlord. I looked at the killer rigs section and decided for the following rig.

- **Processor:** Intel Core i3-6100
- **Motherboard:** MSI Pro H110
- **RAM:** HyperX Fury
- **HDD:** WD Blue 2TB internal hard disk
- **GPU:** ZOTAC GTX 1060 3GB
- **PSU:** Corsair CP-9020098-WW VS Series VS650
- **Keyboard:** Cooler Master Devastator II (bundle)
- **Monitor:** AOC I2279VWHE 22-inch

Is this the best possible rig for ₹60,000? Please suggest me a good case. Looks don't matter but it should have a USB 3.0 port. I don't need an optical drive as I already have one. Lastly, can you play Tom Clancy's Wildlands (co-op) if one has an Xbox and the other has a PC? Please reply as soon as possible.

– Anubhav

A Hey Anubhav, here's a better configuration that you should consider for a rig under ₹60,000.

- **Processor:** Intel Core i3-7100
- **Motherboard:** ASRock H170 Pro4S
- **RAM:** Crucial Ballistix Sport LT Red 8GB DDR4 2400
- **HDD:** Toshiba DT01ACA100
- **GPU:** ASUS GeForce GTX 1060 6GB Turbo
- **PSU:** Corsair VS450
- **Speakers:** F&D F-203G 2.1
- **Keyboard/Mouse bundle:** Gamdias Ares 7 Essential Combo
- **Monitor:** HP 22es IPS 21.5 inch
- **Cabinet:** Antec VSK 4000B U3

Crossplay between different platforms isn't supported yet.
